Neuroelectrodynamics Dorian Aur, Mandar S. Jog, 2010 The essence of brain function consists in how information is processed transferred and stored Current neurophysiological doctrine remains focused within a spike timing paradigm but this has a limited capacity for advancing the understanding of how the brain works This book puts forward a new model the neuroelectrodynamic model NED which describes the intrinsic computational processes by the dynamics and interaction of charges It uses established laws of physics such as those of classical mechanics thermodynamics and quantum physics as the guiding principle to develop a general theoretical construct of the brain s computational model which incorporates the neurobiology of the cells and the molecular machinery itself along with the electrical activity in neurons to explain experimental results and predict the organization of the system After addressing the deficiencies of current approaches the laws and principles required to build a new model are discussed In addition as well as describing experiments which provide the required link between computation and semantics the book highlights important concepts relating the theory of information with computation and the electrical properties of neurons The NED model is explained and expounded and several examples of its application are shown Of interest to all those involved in the fields of neuroscience neurophysiology computer science and the development of artificial intelligence NED is a step forward in understanding the mind in computational terms IOS Press is an international science technical and medical publisher of high quality books for academics scientists and professionals in all fields Some of the areas we publish in Biomedicine Oncology Artificial intelligence Databases and information systems Maritime engineering Nanotechnology Geoengineering All aspects of physics E governance E commerce The knowledge economy Urban studies Arms control Understanding and responding to terrorism Medical informatics Computer Sciences Essentials of Machine Olfaction and Taste Takamichi Nakamoto, 2016-04-18 Essentials of Machine Olfaction and Taste This book provides a valuable information source for olfaction and taste which includes a comprehensive and timely overview of the current state of knowledge of use for olfaction and taste machines Presents original latest research in the field with an emphasis on the recent development of human interfacing Covers the full range of artificial chemical senses including olfaction and taste from basic through to advanced level Timely project in that mobile robots olfactory displays and odour recorders are currently under research driven by commercial demand

discoveries in neural stem cells and therapy The Neuroimmunological Basis of Behavior and Mental Disorders Allan Siegel, Steven S. Zalcman, 2008-11-09 For many years the immune and central nervous systems were thought to function independently with little or no interaction between the two This view has undergone dramatic changes over the past three decades Indeed we now know that there exists various feedback loops between the brain and immune systems that impact significantly upon different behavioral processes including normal behavior and mental disorders Pioneering efforts in generating this change were initiated by a number of early investigators Included were those whose efforts were directed at establishing neuroimmune connections as well as others whose research focused upon the relationship between immunity cytokines and behavior This book brings together outstanding scientists and clinicians who have made major contributions to the rapidly developing field of investigating the relationship between immunity and behavior The book is divided into three parts The first part describes pathways by which the brain and immune systems communicate and interact with each other In the chapter Cytokines and the Blood Brain Barrier provides insight into interactions between the blood brain barrier and cytokines Such interactions underlie basic communication between the immune system and brain that are present in normal as well as in disease conditions In the chapter Neurochemical and Endocrine Responses to Immune Activation The Role of Cytokines the neurochemical and endocrine consequences of immune challenge and cytokine administration on central neurotransmitter activity are discussed
