Venkateswarlu, 2011-08-29 Plants unlike animals are sessile This demands that adverse changes in their environment are quickly recognized distinguished and responded to with suitable reactions Drought heat cold and salinity are among the major abiotic stresses that adversely affect plant growth and productivity In general abiotic stress often causes a series of morphological physiological biochemical and molecular changes that unfavorably affect plant growth development and productivity Drought salinity extreme temperatures cold and heat and oxidative stress are often interrelated these conditions singularly or in combination induce cellular damage To cope with abiotic stresses of paramount significance is to understand plant responses to abiotic stresses that disturb the homeostatic equilibrium at cellular and molecular level in order to identify a common mechanism for multiple stress tolerance This multi authored edited compilation attempts to put forth an all inclusive biochemical and molecular picture in a systems approach wherein mechanism and adaptation aspects of abiotic stress are dealt with The chief objective of the book hence is to deliver
