Advances in Subsea Pipeline Engineering and Technology C.P. Ellinas,1990-05-31 Dr C P Ellinas Advanced Mechanics flexible pipelines pipeline design fabrication and installation deepwater applications Advances in North Sea technology over the last few years have been concerned mostly with marginal fields small diameter pipelines and new materials which are well covered in the first three topics Economic development of marginal fields requires processing of oil and gas to take place not at the wellhead but at existing facilities usually some distance away Hydrocarbons are thus often transported at high pressure and temperature in small diameter pipelines which need to be protected through trenching However such operational practice has brought to the fore a problem that in the past was of little concern namely upheaval buckling
