Econophysics of Wealth Distributions Arnab Chatterjee, Sudhakar Yarlaga, Bikas K. Chakrabarti, 2007-06-25 We all know the hard fact neither wealth nor income is ever uniform for us all Justified or not they are unevenly distributed few are rich and many are poor Investigations for more than hundred years and the recent availability of the income distribution data in the internet made available by the finance ministries of various countries from the tax return data of the income tax departments have revealed some remarkable features Irrespective of many differences in culture history language and to some extent the economic policies followed in different countries the income distribution is seen to follow a particular universal pattern So does the wealth distribution Barring an initial rise in population with income or wealth for the destitutes the population decreases either exponentially or in a log normal way for the majority of middle income group and it eventually decreases following a power law Pareto law following Vilfredo Pareto's observation in 1896 for the richest 5-10 % of the population This seems to be an universal feature valid for most of the countries and civilizations may be in ancient Egypt as well Econophysicists tried to view this as a natural law for a statistical many body dynamical market system analogous to gases liquids or solids classical or quantum

Social Inequality Kathryn Neckerman, 2004-06-18 Inequality in income earnings and wealth has risen dramatically in the United States over the past three decades Most research into this issue has focused on the causes global trade new technology and economic policy rather than the consequences of inequality In *Social Inequality* a group of the nation's leading social scientists opens a wide ranging inquiry into the social implications of rising economic inequality Beginning with a critical evaluation of the existing research they assess whether the recent run up in economic inequality has been accompanied by rising inequality in social domains such as the quality of family and neighborhood life equal access to education and health care job satisfaction and political participation Marcia Meyers and colleagues find that many low income mothers cannot afford market based child care which contributes to inequality both at the present time by reducing maternal employment and family income and through the long term consequences of informal or low quality care on children's educational achievement At the other end of the educational spectrum Thomas Kane links the growing inequality in college attendance to rising tuition and cuts in financial aid Neil Fligstein and Taek Jin Shin show how both job security and job satisfaction have decreased for low wage workers compared with their higher paid counterparts Those who fall behind economically may also suffer diminished access to essential social resources like health care John Mullahy Stephanie Robert and Barbara Wolfe discuss why higher inequality may lead to poorer health wider inequality might mean increased stress related ailments for the poor and it might also be associated with public health care policies that favor the privileged On the political front Richard Freeman concludes that political participation has become more stratified as incomes have become more unequal Workers at the bottom of the income scale may simply be too hard pressed or too demoralized to care about political participation *Social Inequality* concludes with a comprehensive section on the methodological problems involved in disentangling the effects of inequality from other economic factors which will be of great benefit to future investigators While today's widening inequality may be a temporary episode the danger is that the current economic divisions may set in motion a self perpetuating cycle of social disadvantage The most comprehensive review of this quandary to date *Social Inequality* maps out a new agenda for research on inequality in America with important implications for public policy

The Lion's Share Guido Alfani, Matteo Di Tullio, 2019-02-07 This is the most in depth analysis of inequality and social polarization ever

attempted for a preindustrial society Using data from the archives of the Venetian Terraferma and compared with information available for elsewhere in Europe Guido Alfani and Matteo Di Tullio demonstrate that the rise of the fiscal military state served to increase economic inequality in the early modern period Preindustrial fiscal systems tended to be regressive in nature and increased post tax inequality compared to pre tax in contrast to what we would assume is the case in contemporary societies This led to greater and greater disparities in wealth which were made worse still as taxes were collected almost entirely to fund war and defence rather than social welfare Though focused on Old Regime Europe Alfani and Di Tullio s findings speak to contemporary debates about the roots of inequality and social stratification **Complex**
