Research and Application of High-Performance Concrete Faxing Ding,Junjie Zeng,Sudharshan N. Raman,Xiaomeng Hou,2025-01-30 This book collects research outcomes related to high performance concrete as a civil engineering material providing readers with targeted research experiences and case analyses From the introduction of Portland cement in the 1920s to the emergence of the water cement ratio theory in the early 20th century concrete has become a robust foundation for the rapid development of modern architecture Due to its advantages and performance superior to traditional natural materials it has become the primary building material for modern structures As building heights and design requirements have increased ordinary concrete can no longer meet modern architectural needs making high performance concrete a necessity for engineering projects Currently high performance concrete is primarily produced by altering the water cement ratio and adding admixtures With the gradual scarcity of natural aggregates high performance concrete can meet safe design standards while reducing resource consumption Compared to ultra high performance concrete high performance concrete is currently more suitable for engineering applications and has a more mature and comprehensive production process and applicability This book includes selected papers from 2024 International Conference on Civil Engineering Structures and Concrete Materials focusing on the mechanism studies and applications of high performance concrete We hope to share the latest research on high performance concrete with civil engineering materials engineers worldwide especially studies on fiber reinforced concrete and high performance concrete for complex application environments
