Arey,2014-06-05 Biased Signaling in Physiology Pharmacology and Therapeutics is a unique and essential reference for the  
scientific community concerning how conformational dependent activation is a common phenomenon across many classes of  
receptors or signaling molecules It discusses the role of conformational dynamics in leading to signaling bias across different  
classes of receptors and signaling molecules By providing a broader view of signaling bias this resource helps to explain  
common mechanisms shared across receptor classes and how this can be utilized to elucidate their cellular activity and  
better understand their therapeutic potential Written for both new and established scientists in pharmacology cell biology  
biochemistry and signal transduction as well as physicians this book clearly illustrates how biased receptor signaling can be  
utilized to develop and understand complex pharmacology Chapters are each focused on a specific class of receptor or other  
important topic and make use of real world examples illustrating how the latest research in signal transduction has led to a  
better understanding of pharmacology and cell biology This structure creates a basis for understanding that physiological  
signalling bias has been selected by nature in order to provide complex and tissue specific biological responses in the face of  
limited receptors and signaling pathways This book provides a framework to reveal that these physiological mechanisms are  
not restricted to one receptor type or family and thus presents receptor signaling from a newer more global perspective  
Offers a unique and valuable resource on biased receptor signaling that provides a global view for better understanding  
pharmacology across many receptor families Integrates biased receptor signaling physiology and pharmacology to place this
