O'Neil, Jr.,Eva Baker,Harold F. O'Neil,2013-11-05 This volume offers an expansion of ideas presented at a recent conference convened to identify the major strategies and more promising practices for assessing technology The authors representing government business and university sectors helped to set the boundaries of present technology assessment by offering perspectives from computer science cognitive and military psychology and education Their work explores both the use of techniques to assess technology and the use of technology to facilitate the assessment process The book s main purpose is to portray the state of the art in technology assessment and to provide conceptual options to help readers understand the power of technology Technological innovation will continue to develop its own standards of practice and effectiveness To the extent that these practices are empirically based designers supporters and consumers will be given better information for their decisions *Motivation and Action* Heinz Heckhausen,2012-12-06 The translation of this volume has been a long and sometime arduous journey giving nearly literal meaning to the Latin term translatus meaning to carry across In fact it required many journeys both geographically between Canada and Germany and figuratively between German and English language thought and culture between the mind of a German professor and that of his American colleague Whether or not it was all worthwhile must be left to the reader s judgment but let me outline the rationale for embarking on this venture When the first German edition of this book appeared in 1980 it was acclaimed not only by German scholars but by those outside the German speaking community as well In fact it received extremely favorable reviews even in English language journals which is unusual for a foreign text It was recognized that this was far more than just another text book on motivation For one thing it exposed and examined the multi faceted roots that have contributed to contemporary theory and research in motivation The author skillfully examined the motivational concepts theories and research that have emanated from many areas of psychology such as learning theory social psychol ogy personality
