Assessment of Manganese Nodule Resources ,1982 **Cook Islands Manganese Nodule Resource Assessment, Economic and Policy Analysis** ,1993 *Handbook of Marine Mineral Deposits* David Spencer Cronan, 2017-10-19 This handbook summarizes the main advances in our understanding of marine minerals and concentrates on the deposits of proven economic potential In cases where our knowledge may be too limited to allow defining of their economic potential those minerals are covered regionally or by deposit type Handbook of Marine Mineral Deposits is divided into three sections Marine placers manganese nodules and crusts and deep sea hydrothermal mineralization All of these mineral deposits have great potential importance to economic geologists and marine mines Edited by an acknowledged expert in the field this handbook includes work by internationally renowned contributors The new United Nations Law of the Sea ratified by over 100 countries within the past two years provides a framework and guidelines for deep sea mineral exploration that increases international interest in this book The Handbook serves as a platform from which to launch the more detailed evaluation studies that will need to take place in the 21st century before recovery can continue or commence Handbook of Marine Mineral Deposits is useful to mineralogists economic geologists marine geologists marine miners and conservationists

Features Deep-Sea Minerals Developments in the 20th Century David S. Cronan, 2024-05-06 The book is an historical monograph on deep sea mineral related activities and attitudes towards deep sea mining in the 20th Century which makes comparisons with the current situation in regard to those activities and attitudes It reviews developments in the study of and prospects and plans for mining deep sea manganese nodules cobalt rich crusts hydrothermal deposits and phosphorites and discusses associated environmental technological and economic issues It is based on several sources First the author s experience gleaned from around 50 years of attending conferences on the subject the most important of which was the annual Underwater Mining Institutes held from 1970 onwards at which much of the material in the book was first exposed second discussions with and advice from the author s colleagues on the subject all attributed and third the published literature The target audiences are marine mining companies and their associates marine environmentalists UN and Government administrators responsible for seabed activities undergraduate students of marine affairs and history and interested lay persons Unique features include the widespread sources used including unpublished conference proceedings and reports personal insights gleaned from more than 50 years of working in the field the author s publications dating from 1967 2022 and attributed personal communications from the author s colleagues Proceedings of the Marine Minerals Workshop, March 23-25, 1976, Silver Spring, Md United States. National Oceanic and Atmospheric Administration, 1976
Proceedings of the Marine Minerals Workshop, March 23-25, 1976, Silver Spring, Md ,1976 **Ocean Mining Report** ,1977 Marine Mineral Resources Fillmore C. F. Earney, 2012-11-12 During the past century scientists world statesmen

and international entrepreneurs have become increasingly aware of the potential of the oceans as a source of minerals This book provides an authoritative picture of the current state of marine mineral extraction A major work of reference it will be essential reading for both those engaged in maritime studies and for professional organisations involved in the extraction of underwater minerals

Report of the Committee on Energy and Natural Resources to the Committee on the Budget, United States Senate, Pursuant to Section 301(c) of the Congressional Budget and Impoundment Control Act of 1974 United States. Congress. Senate. Committee on Energy and Natural Resources,1978 Delineation of Mine-Sites and Potential in Different Sea Areas Jean-Pierre Lévy,2012-12-06 Prospecting and exploration for manganese nodules has as its ultimate objective the discovery and delineation of an area of the ocean floor with reserves of sufficient quantity and quality to support a mining operation under existing economic technical and political conditions While prospecting concentrates primarily on the collection of geological information an exploration programme includes other activities that relate to the development of technology financial analysis of the prospect and environmental protection Such work on a deposit in turn leads to the development of a mine site The mine site concept brings together information in a way that recognizes the interplay among a number of dynamic factors which must satisfy a set of technical and economic conditions Defining a mine site therefore is a process of accounting for those factors Throughout the years of meetings of the Third United Nations Conference on the Law of the Sea many questions arose about ocean mine sites Two related topics in particular received attention the total number of available mine sites and the amount of area necessary for a mining operation Both of these topics have been subject to a great deal of speculation and even with the best available information there remains a degree of uncertainty that arises from both incomplete knowledge and natural variability in the seabed and the resource and different technology and production objectives For example estimates of the size of the area necessary for an ocean mine site vary even when made by the same company

The Indian Ocean Nodule Field Ranadhir Mukhopadhyay,A.K. Ghosh,S.D. Iyer,2007-12-08 The book includes a synthesis of research findings on the structure and evolution of the Central Indian Ocean Basin and its ferromanganese deposits in particular on the exploration campaign since 1980s A comprehensive mixture of recent studies along with classical theories starting from the 1960s is the hallmark of the book Recent concepts and hypotheses and also critical appreciation of the state of the art knowledge on nodule formation and resource management are incorporated After limiting the geographical extension of the nodule field and describing its physiographic geological biological physical and chemical characteristics in chapter 1 the various structural tectonic and volcanic elements are described in chapters 2 and 3 The bottom sediment characteristics that floor the nodules and crusts are dealt with in chapter 4 The nodules and crusts are described in detail in chapter 5 and their process of formation in the light of variable source material local and regional tectonic activities and midplate secondary volcanisms are discussed The mining environment metallurgy legal and economic aspects of the nodule resources are discussed in chapter 6 This title

fulfils the growing need to bring voluminous but scattered information in the form of a book for easy dissemination to students and researchers First dedicated book on the Indian Ocean manganese nodule resources Comprehensively discusses the dynamics of nodule formation in the Indian Ocean Nodule Field IONF Independently assesses the influence of tectonics and volcanism on the manganese nodule resource potential in local and regional scales Composite and Disaggregated Maps As Preliminary Aids to Analysis of Manganese Nodule Geochemistry J. M. Botbol,1993-05 *Resource Assessment*,1985 Marine Minerals P.G. Teleki,M.R. Dobson,J.R. Moore,U. von Stackelberg,2012-12-06 Discoveries of new types of marine mineral occurrences during the last decade and specifically the massive sulfide deposits at spreading ridges on the ocean floor have significantly advanced geologic concepts about the origin of ore deposits in a very short period of time These discoveries also renewed interest in all marine mineral occurrences including the well known manganese nodules and led to more wide ranging and thorough examination of cobalt rich manganese crusts expanded mapping of phosphorites of continental shelves and the initiation of several new surveys for placer minerals in shallow waters The result of these activities is already noticeable in an increasingly broader variety of minerals being found on and below the ocean floor This upsurge of scientific interest and research in marine minerals provided the impetus to organize an Advanced Research Workshop under auspices of the NATO Science Council and its Special Program Panel on Marine Sciences The workshop was held in the United Kingdom at Gregynog Hall of the University of Wales June 10 16 1985 under the theme Marine Minerals Resource Assessment Strategies The timing of this workshop was propitious in many ways First marine surveys and expeditions to chart the mineral resources of the world s oceans had increased in number in recent years involving a growing number of nations interested in obtaining firsthand information *International Law of the Sea and Marine Affairs* Nikos Papadakis,Martin Ira Glassner,1984-04-06 International Law of the Sea and Marine Affairs *Mineral-resource Assessments in Alaska* Wallace Hall Campbell,1984 **New Publications of the Geological Survey** Geological Survey (U.S.),1978

A Joint Venture Agreement for Seabed Mining G. Jaenicke,2013-11-11 The Third United Nations Conference on the Law of the Sea is preparing rules for the establishment of an international legal regime governing the exploration and exploitation of the resources of the international seabed The Draft Convention on the Law of the Sea Informal Text of 27 August 1980 which has so far been the result of the negotiations during the preceding sessions of the Conference provides for a so called parallel system under which an international Enterprise as well as national private or state owned companies will be granted access to the resources of the international seabed under the control of an International Seabed Authority The Draft Convention also envisages the conclusion of joint venture agreements between the international Enterprise and national companies or consortia and encourages such cooperation through granting various incentives Such joint ventures will probably play an important part in making the international Enterprise operative in the early years of its existence At the Conference concerns have been expressed whether and when the Enterprise as a newcomer would be in a position to start

seabed mining and to compete effectively with the national companies The Draft Convention provides for a number of ways and means to enable the Enterprise to develop its technological and financial capabilities for deep sea mining as early as possible **Minerals Yearbook** ,1981
