Assessment Of Natural Hazards And Disasters In Canada:

An Assessment of Natural Hazards and Disasters in Canada David Etkin, C.E. Haque, Gregory R. Brooks, 2003-04-30 The problems and issues of natural hazards and disasters both globally and in Canada are becoming increasingly important since the costs of extreme natural events have been escalating and significant vulnerabilities exist in Canadian society Without thoughtful and effective mitigation these costs and human suffering are likely to continue to increase An assessment of knowledge research and practice in risk hazards and disasters fields is a fundamental step towards the goal of prevention and mitigation This book on natural hazards and disasters in Canada is the first comprehensive interdisciplinary publication on this subject and is the result of a national assessment on this topic A variety of papers from the physical and social sciences explores both the risks associated with these hazards and adaptive strategies that can be used to reduce those risks Audience This excellent collection of papers is intended for academics professionals and practitioners involved in hazard reduction activities who wish to obtain a better understanding of Canadian natural hazards

Mitigation of Natural Hazards and Disasters C. Emdad Haque, 2006-02-23 For these and other reasons the findings reported in this volume will be of large significance as future policy decisions are made in a wide variety of natural and social environments GILBERT F WHITE Professor Emeritus Geography and Institute of Behavioral Science University of Colorado Colorado USA 2 C Mitigation and Adaptation Strategies for Global Change 2005 10 335 353 Springer 2005 ADAPTATION OPTIONS STRATEGIES FOR HAZARDS AND VULNERABILITY MITIGATION AN INTERNATIONAL PERSPECTIVE 1 2 C EMDAD HAQUE and IAN BURTON 1 Natural Resources Institute University of Manitoba Winnipeg Manitoba Canada 2 Institute for Environmental Studies University of Toronto Toronto Ontario Canada Author for correspondence Tel 204 474 8375 Fax 204 261 0038 E mail haque@ce.ms.umanitoba.ca Received 15 May 2004 accepted in final form 17 July 2004 Abstract The broad objective of this special issue of Mitigation and Adaptation Strategies for Global Change is to address some of the gaps in our knowledge and understanding of the policies programs and measures that might be applied to natural hazards and their impacts in an era of climate change Given the global impacts of climate change and world wide pattern of increasing losses from natural hazards we necessarily adopt an international perspective The specific goals of the special issue are to a encompass experiential aspects emphasizing current practice of mitigation and its associated measures and their results and b explore primary or root causes of alarming shifts in human and economic costs of environmental extremes

Geospatial Techniques in Urban Hazard and Disaster Analysis Pamela S. Showalter, Yongmei Lu, 2009-11-11 This book is the second in a series that examines how geographic information technologies GIT are being implemented to improve our understanding of a variety of hazard and disaster situations The main types of technologies covered under the umbrella of GIT as used in this volume are geographic information systems remote sensing not including ground penetrating or underwater systems and global positioning systems

Our focus is on urban areas broadly defined in order to encompass rapidly growing and densely populated areas that may not be considered urban in the conventional sense. The material presented here is also unabashedly applied. Our goal is to provide GIT tools to those seeking more efficient ways to respond to, recover from, mitigate, prevent, and/or model hazard and disaster events in urban settings. Therefore, this book was created not only with our colleagues in the academic world in mind but also for hazards professionals and practitioners. We also believe graduate students will find the material presented here of interest as may upper division undergraduate students.

Natural Disasters and Risk Management in Canada Nirupama Agrawal, 2018-03-27. These chapters provide valuable and comprehensive information on a variety of hazards including both scientific and social aspects of disasters. The work introduces the concept of large, medium, and small scale hazards and includes many useful case studies as well as working examples of theoretical concepts. As readers will acknowledge today, the distinction between natural and technological hazards is becoming blurred, and a new concept of NATECH hazards is evolving. For permanent hazards such as tides, wind, waves, coastal erosion, and climate change, routine predictions are made; whereas for evanescent hazards including droughts, sea level rise, and coastal subsidence, monitoring of various parameters is the norm. Only for episodic hazards, for example hurricanes, winter storms, tsunamis, and river floods, early warning systems are used with varying degrees of success. The book explores how, for certain episodic hazards like tornadoes, landslides, forest fires, snow avalanches, and volcanic eruptions, the early warning systems are still in various stages of development. Readers will gain knowledge of theoretical and practical concepts of risk evaluation which assist in better understanding of disaster dynamics, and readers will become better equipped in quantification of disaster risk and vulnerability. The author explains how risk reduction initiatives, taking into account stakeholders' participation and perception, can provide a roadmap to building resilient communities and cities. This book will be useful not only to practitioners of disaster management but also to research scholars and graduate students. It is highly readable and will appeal more broadly too to all those who are interested in the very latest thinking on and expert analysis of hazards and disasters.
