Laufer, Shlomo Mashiach, Joseph G. Schenker, 2012-12-06 The World Congress of In Vitro Fertilization and Alternate Assisted Reproduction held in Jerusalem Israel 27 April 1989 was the sixth in the sequence of these Congresses but was the first to emphasize the major importance and the place of assisted reproductive technologies in the treatment of infertility The eternal City of Jerusalem witnessed the gathering of more than 1500 participants from all over the world who shared and exchanged knowledge and up to date experience in this ever evolving field The high quality scientific contributions to the Congress culminated in the publication of this Proceedings It embraces all important aspects in the field of in vitro fertilization and alternate assisted reproduction Papers on controversies and diversities of methods to stimulate the ovaries imaging techniques basic research and state of the art papers on ovarian physiology the role of GnRH and its analog clinical aspects of IVF treatment and cryopreservation up to date techniques in assisted reproductive technologies that are quickly developing in conjunction with IVF were included When should IVF be preferable to surgery What are the expected up to date world results and what are the psychological moral ethical and religious implications These are all the concerns of the treating team and are addressed here Male factor infertility remains a frustrating problem but advances in the understanding of sperm egg interaction sperm evaluation and preparation are reported Micromanipulation emerges as a possible alternative to bring some relief to this problem but it also promises to be central in promoting the field of prenatal genetic analysis

*Somatic Cell Nuclear Transfer* Peter Sutovsky, 2007-12-22 When I was first approached to edit the present volume I was somewhat reluctant to undertake this humbling task because most of my own scientific expertise is derived from studies of mammalian fertilization rather than somatic cell nuclear transfer SCNT However in the last ten years I was very fortunate to train and collaborate and communicate with a number of distinguished donors many of whom kindly agreed to contribute to the present volume This experience made me appreciate that the understanding of cellular and molecular events during and after SCNT is deeply rooted in our knowledge of fertilization of mammalian ovum by the spermatozoon to which I prefer to refer to as natural fertilization not to say that SCNT should be regarded as unnatural fertilization Unique cellular events arising from SCNT have no parallel in natural fertilization and early pre implantation development The list includes the requirement of donor cell nuclear remodeling disposal of donor cell organelles the possibility of heteroplasmy i.e. presence of mixed mitochondrial genomes and altered mode of oocyte activation Thanks to seminal contributions of my distinguished colleagues the present volume reviews

the progress of SCNT technology in major mammalian species including mouse pig and cattle while at the same time parallels can be drawn and distinctions made between the cellular and molecular basis of nuclear transfer and fertilization

**Assisted Reproductive Technologies in Animals Volume 2** Juan Carlos Gardón,Katy Satué Ambrojo,2025-06-08 This Volume 2 of a two volume topical collection highlights reproductive biotechnologies applied to males and females of different animal species Organized in two parts you will find a detailed review of the latest developments in reproduction management for equines cattle swine and birds The authors discuss the application of ultrasonography equine cloning animal germplasm banks the captive breeding of threatened wild birds as well as nanotechnologies and artificial intelligence Vivid illustrations complement the rich information Each contributor brings an own perspective knowledge and writing style resulting in the latest research results advances and current trends in assisted reproductive technologies The work also includes case studies and hands on examples to provide readers with real life applications The practical approach will enhance the learning experience and differentiates this volume from mainly theoretical literature Specifically tailored to the professional audience within the field of assisted animal reproduction this book will update veterinarians researchers animal breeders and advanced students By presenting innovative techniques and approaches not widely covered in other works this volume offers new perspectives and ideas for reproductive management

*Preservation of Human Oocytes* Andrea Borini,Giovanni Coticchio,2009-08-27 Oocyte cryopreservation entails important potential advantages for humanIVF offering a less ethically disputable alternative to embryo cryopreservation simplifying and making safer oocyte donation and giving an opportunity forfertility preservation to women at risk of premature ovarian failure as an effectof genetic factors or chemo or radiother

**Sourcebook of Models for Biomedical Research** P. Michael Conn,2008-03-07 The collection of systems

represented in Sourcebook of genomic programs although this work is certainly well Models for Biomedical Research is an effort to reflect the represented and indexed diversity and utility of models that are used in biomedicine Some models have been omitted due to page limitations That utility is based on the consideration that observations and we have encouraged the authors to use tables and made in particular organisms will provide insight into the figures to make comparisons of models so that observations workings of other more complex systems Even the cell not available in primary publications can become useful to cycle in the simple yeast cell has similarities to that in the reader humans and regulation with similar proteins occurs We thank Richard Lansing and the staff at Humana for Some models have the advantage that the reproductive guidance through the publication process mitotic development or aging cycles are rapid compared As this book was entering production we learned of the with those in humans others are utilized because individual loss of Tom Lanigan Sr Tom was a leader and innovator proteins may be studied in an advantageous way and that in scientific publishing and a good friend and colleague to have human homologs Other organisms are facile to grow all in the exploratory enterprise We dedicate this book to in laboratory settings or lend themselves to convenient analysis his memory We will miss him greatly
