Asthma Physiology Immunopharmacology Treatment:

Asthma K. Frank Austen, Lawrence M. Lichtenstein, 2013-10-22 *Asthma Physiology Immunopharmacology and Treatment* is a collection of essays that discusses the clinical signs and symptoms of allergic bronchial asthma and the effects of a number of intricate sequences of biochemical reactions initiated by the combination of antigen and antibody. It presents such topics as the pathobiologic mechanisms of asthma. The book discusses the physiologic changes in the acute asthmatic attack. It focuses on the autonomic regulation of airway smooth muscle and the nervous regulation of respiration. Another topic of interest is the genetic aspects of asthma. The section that follows is a review of the biochemical, pharmacological, and immunological factors in the release of chemical mediators from human lung. The book also presents the characteristics of pharmacologic receptor systems and the role of the parasympathetic nervous system in asthma. The text will provide valuable insights for physicians, scientists, students, and researchers in the field of human anatomy.

Immunological Mechanisms in Asthma and Allergic Diseases Douglas S. Robinson, 2000-01-01 This book explores the cellular and molecular mechanisms involved in asthma and allergic diseases from basic immunology to the treatment of patients. Arising from a special symposium held to celebrate Professor A. Barry Kay's 20th anniversary as Head of the Department of Allergy and Clinical Immunology at the National Heart and Lung Institute, London, the publication presents 18 review articles by an impressive cross section of experts in the field. Topics considered include Th1 and Th2 cells, the regulation of Th2 cytokine transcription, the role of T cells in the immunopathogenesis of asthma, and MHC-restricted IgE-independent T cell-induced late phase responses in human subjects. Further chapters focus on eosinophil adhesion and activation, the role of C-C chemokines in the recruitment of eosinophils, and the interactions between eosinophils and fibroblasts. T cell recruitment and T cell interactions in cutaneous basophil hypersensitivity and fibrotic lung disease are discussed, as is the molecular pathology of allergic disease. Finally, treatment approaches are considered in chapters on the molecular basis of corticosteroid actions in asthma, immunosuppression in asthma, and immunotherapy of allergic diseases.

Pharmacology of Asthma Clive P. Page, Peter J. Barnes, 2012-12-06. This volume forms part of a prestigious series and covers the latest advances in our understanding of the pathophysiology and treatment of asthma. Our understanding of asthma has changed dramatically in recent years and much of this new information is brought together in this volume written by internationally recognised authorities. The aim of the book is to review in depth the changing concepts of inflammatory processes in asthma and to discuss the implications for research of this common chronic disease. Many of the advances in and future therapy of asthma have originated from a pharmacological approach and this volume highlights the promising new options for pharmacological intervention. It is hoped this book will be invaluable for research scientists and clinicians involved in asthma research and will be a major reference resource for chest physicians and those involved in the development of novel pharmaceutical entities. Each chapter is extensively referenced, generously illustrated with clear diagrams and photographs and represents a state of the art review of this growing area.

Animal Models of T Cell-Mediated Skin Diseases T. Zollner, Harald Renz, Khusru Asadullah, 2007-01-19 Pharmaceutical companies are spending increasing amounts of money on drug discovery and development Nevertheless attrition rates in clinical development are still very high and up to 90% of new compounds fail in clinical phase I/III trials which is partially due to lack of clinical efficacy This indicates a strong need for highly predictive in vitro and in vivo models The 50th International Workshop of the Ernst Schering Research Foundation focussed on Animal Models of T Cell Mediated Skin Diseases Such animal models should have impact not only on inflammatory dermatoses but also on other inflammatory disorders due to their model character The current volume summarises recent advances in animal research that are important for anti inflammatory drug discovery

Prostaglandins, Leukotrienes, and the Immune Response John L. Ninnemann, 1988-09-30 This study looks at the way the products of arachidonic acid metabolism are active both in normal and abnormal immune responses While some of the fundamental issues such as whether lymphocytes are capable of producing prostaglandins and leukotrienes are still hotly debated the evidence is overwhelming that many specific immunological problems and disease states are associated with alterations in the normal balance of arachidonic acid metabolism This book provides a review of the history and chemistry of the arachidonic acid cascade as well as an exhaustive survey of the literature concerning the interaction of arachidonic acid metabolites with cells of the immune system The author also presents and discusses the evidence demonstrating prostaglandin and leukotriene participation in response to injury and in malignancy tissue and organ rejection rheumatoid arthritis autoimmunity and allergy
