Black Holes, Wormholes and Time Machines Jim Al-Khalili, 2002-01-01 Do you know What might happen if you fall into a black hole That the Universe does not have an edge That the reason it gets dark at night is proof of the Big Bang That cosmic particles time travel through the atmosphere defying death That our past present and future might all coexist out there With two remarkable ideas Albert Einstein revolutionized our view of the Universe His first was that nothing can travel faster than light the ultimate speed limit This simple fact leads to the unavoidable conclusion that space and time must be linked together forever as Spacetime With his second monumental insight Einstein showed how Spacetime is warped and stretched by the gravity of all objects in the Universe and even punctured by black holes But such possible twisting of Spacetime allowed a magic not even Einstein could have imagined time travel Theoretical physicist Jim Al Khalili finally lays science fiction to rest as he opens up Einstein's Universe Leading us gently and light heartedly through the dizzying world of our space and time he even gives us the recipe for a time machine capable of taking us Back to the Future to Alice's Wonderland or on a trip with the Terminator *The Beginning and the End* Clément Vidal, 2014-05-16 In this fascinating journey to the edge of science Vidal takes on big philosophical questions Does our universe have a beginning and an end or is it cyclic Are we alone in the universe What is the role of intelligent life if any in cosmic evolution Grounded in science and committed to philosophical rigor this book presents an evolutionary worldview where the rise of intelligent life is not an accident but may well be the key to unlocking the universe's deepest mysteries Vidal shows how the fine tuning controversy can be advanced with computer simulations He also explores whether natural or artificial selection could hold on a cosmic scale In perhaps his boldest hypothesis he argues that signs of advanced extraterrestrial civilizations are already present in our astrophysical data His conclusions invite us to see the meaning of life evolution and intelligence from a novel cosmological framework that should stir debate for years to come **Black Holes, Wormholes and Time Machines,**

Second Edition Jim Al-Khalili, 2011-12-08 Bringing the material up to date **Black Holes Wormholes and Time Machines** Second Edition captures the new ideas and discoveries made in physics since the publication of the best selling first edition While retaining the popular format and style of its predecessor this edition explores the latest developments in high energy astroparticle physics and Big Bang cosmology The book continues to make the ideas and theories of modern physics easily understood by anyone from researchers to students to general science enthusiasts Taking you on a journey through space

Impossibility : The Limits of Science and the Science of Limits John D. Barrow, 1998-03-12 Are there some things we can never think or know let alone do In this fascinating book acclaimed author John Barrow reveals the often paradoxical limits on knowledge and achievement and shows that the notion of impossibility has played and continues to play a striking role in our thinking and in the way in which we understand the universe and ourselves What are the true limits of science and human endeavour The end of each century leads to a stocktaking of human achievement and our expectation about the future This new book by John D Barrow looks at what limits there might be to human discovery and what we might find ultimately to be unknowable undoable or unthinkable Weaving together a tapestry of surprises Barrow explores the frontiers of knowledge taking in surrealism impossible figures time travel paradoxes of logic and perspective theological speculations about Beings for whom nothing is impossible all stimulate us to contemplate something more than what is With sufficient time and money at our disposal why should we find anything impossible Barrow explores the limits that may be imposed upon a full understanding of the physical Universe by constraints of technology computes cost and complexity He considers how the nature of the universe's structure prevents us from answering the deepest questions about its beginning its structure and its future And he delves into the deep limits imposed by the nature of knowledge itself which have profound implications for any quest for complete knowledge They take us into the debates over the problems of free will and consciousness Gödel's famous theorem about our inability to capture the truths of mathematics by rules and axioms is explored to see if it has any implications for science Clearly and engagingly written and using simple explanations this book reveals that impossibility is a deep and powerful notion that any Universe complex enough to contain conscious beings will contain limits on what those beings can know about their Universe that what we cannot know defines reality as surely as what we can know Impossibility is a two edged sword it threatens the completeness of the scientific enterprise yet without it there would be no laws of Nature no science and no scientists In this illuminating well written account of Limits with capital L John D Barrow chronicles and explains the limits of science as a reality generation mechanism and why it matters So for about as good an account as you're going to get of where science stops read this book It won't tell you any final answer But the journey is far more interesting and important than the destination Nature
