Blackflies And White Water:

Climate Change on Mountains Olivier Dangles, 2023-10-28 The world is warming up rapidly and this change is most noticeable in mountains with already observable consequences on flora and fauna This book presents concepts methodologies and major achievements of recent research in climate change ecology in mountains by placing this research in a historical perspective that of travelers and naturalists of the Romantic era and first of all Alexander von Humboldt There is now a renewed interest both in academia and beyond in Humboldt his writings and his view of nature But how can we actually make use of his writings How can we put his philosophy into practice How can we still learn from past scientific figures and do a better science today In this book the author presents how it is possible to succeed in modern science by returning to sources by renewing the tradition of past polymaths such as Humboldt and by having a fully humanistic approach in science He illustrates his point based on his 15 year experience in the study of the ecological effects of climate change in the tropical Andes showing how he has incorporated approaches from other disciplines from different branches of science from history and the arts to achieve a more comprehensive view of his scientific field Alongside hard data discoveries by past naturalists build our understanding of the world but appealing to our emotions makes us want to understand it In the author's view this is a productive and enjoyable way of doing science that speaks to our humanity and also increases our knowledge about nature This academic cross over book appeals to a broad audience of students scientists or supported by attractive illustrations to anyone interested in the adventure or making of science but not necessarily with a scientific background

The Natural History of Blackflies Roger W. Crosskey, 1990-11-28 The study of blackflies has come of age the blackfly is now recognized as a carrier of major endemic diseases its larval stages are seen to play a major role in the ecology of rivers and streams and blackfly chromosomes have proved unusually amenable material for cytogenetical studies The expanded interest in the blackfly has greatly increased the scientific literature about them literature that is extremely technical highly specialized and often of little help to non specialists This work bridges the gap between specialists and those whose work brings them in contact with the blackfly but who need information at a more general level It synthesizes present knowledge about the natural history of the fly family Simuliidae covering taxonomic background elements of larval structure and life in water adult fly structure migration mating biting and bloodsucking human diseases and natural enemies of larval and adult flies Over 1200 bibliographic citations a glossary of technical terms and numerous figures tables and illustrations are included

Blackflies and White Water A. Tony Sloan, 1977 **American Black Flies Or Buffalo Gnats** John Russell Malloch, 1914 **Integrated Vector Management** G. A. Matthews, 2011-08-17 Diseases transmitted by insects continue to have a major impact on human populations Malaria dengue onchocerciasis sleeping sickness and leishmaniasis all adversely affect man Malaria is one of the most important causes of child mortality and reduces economic development in many countries with agricultural productivity often greatly reduced as many vectors are active in the wet season favourable for

crop production Vector control is crucial to reduce the extent to which drugs are needed to treat the diseases as the parasite can become resistant or the drugs are often too expensive for those living in rural areas and urban slums most affected by these diseases Chemical control of vectors is often the only method that can reduce vector populations in a disease epidemic but with vectors developing resistance to insecticides there is increasing awareness that a single control method is often insufficient and also that chemical control must be integrated where possible with other control measures In Integrated Vector Management Graham Matthews covers the main chemical methods of vector control including the use of indoor residual spraying space treatments the use of treated bed nets and larviciding but also stresses the importance of drainage schemes and improvement of houses to prevent access of indoor vectors techniques that have largely been responsible for reducing the risk of vector borne diseases in Europe and the USA This book combines practical information from successful vector control programmes including early use of DDT and recent research into a vital resource for all those now involved in combating insect vector borne diseases Integrated Vector Management is an essential tool not only for medical entomologists and those directly involved in government health departments but also for all those who provide the skills and management needed to operate successful area wide vector management programmes Libraries in all universities and research establishments world wide where biological sciences medicine and agriculture are studied and taught should have multiple copies of this important book

Dams and Disease William Jobin,2003-09-02 A guide to help planners and engineers to the improvement of future water projects The past century of global experience on water projects is presented as the basis for creating new approaches First hand analyses including 35 case studies from 25 countries portray the influence of politicians biologists engineers computer models and physicians on the spectacular successes and failures of the builders of canals and dams By drawing on this experience the author outlines methods for assessing predicting and preventing major water associated diseases around large dams canals and irrigation systems

Return to Moose River Earl Brechlin,2018-04-01 Someone once asked me how much I charge to guide people into the woods That s free I explained Anyone can get themselves into the woods You pay me to get you out Can anyone really know the northern forest It is something you feel more in your heart than in your head You may be able to locate your place on a map but can you pinpoint the places the forest has hold of your soul For more than forty years Maine Guide Earl Brechlin has sought the answers Through this series of interconnected essays Brechlin recounts the annual canoe trips to the North Maine Woods he has made with a small group of friends closing with the death of his twin brother and the group s last trip to spread his brother s ashes in the place he loved best Often humorous and thrilling at once the heartfelt narrative is peppered with tidbits of history woods lore and sage advice from a seasoned outdoorsman What shines through is the author s profound love of the natural world and his place in it

Opening Eyes Hugh R Taylor,2025-08-06 Senior ophthalmology student Dr Hugh Ringland Taylor was in the field with the National Trachoma and Eye Health Program with Professor Fred Hollows in the 1970s Professor Hugh

Ringland Taylor AC decided to change the course of his life in his late fifties in 2006. Soon he was the Harold Mitchell Professor of Indigenous Eye Health at the University of Melbourne, closing the gap for vision, some more, and attacking trachoma, object total elimination of Australia's sandy blight, Chlamydis tracomatis, extinct. True, he had studied trachoma in five continents. He'd even written the first book on it to be published for decades. Trachoma, a blinding scourge from the Bronze Age to the 21st century, his update covering a revolution in eye health delivery and blindness prevention. He had top drawer credibility at WHO and the International Agency for the Prevention of Blindness. But this goal required diplomacy, lobbying, connecting people, community liaison, and listening, advertising the magic of meeting AFL legends in the flesh, education, fund raising, financial management, and dealing with whatever arises. Walls between medical disciplines, around bureaucracies, state borders, wherever there are to be climbed. Readers will be surprised by what a public health campaign involves. For 13 years he was a researcher of trachoma, onchocerciasis, and other causes of blindness at Johns Hopkins University, Maryland, its famed Wilmer Eye Research Institute, largely. His work on the effect of a band of ultra violet light on the eyes of the watermen who collect crustaceans and molluscs in Chesapeake Bay had ripple effects in China, Taiwan, South Korea, and Singapore. By law, schoolchildren there must spend 60 minutes a day outside, a myopia prevention measure. In the 1990s, Hugh was the Ringland Anderson Professor of Ophthalmology at the University of Melbourne. He was the founding director of the Centre for Eye Research Australia, CERA, now an international leader. Hugh lives in Melbourne with his wife, Liz Dax AM. They have four adult children and seven grandchildren.

Bacterial Control of Mosquitoes & Black Flies
 Huguette de Barjac, Donald J. Sutherland, 2012-12-06. Mosquitoes and black flies are a constant threat to health and comfort, yet the modern chemical pesticides used to control them have created serious ecological problems. Populations of resistant mosquitoes and black flies have evolved; beneficial insects and natural predators have been destroyed; and environmental pollution has increased worldwide. Therefore, scientists have energetically sought new environmentally safe technologies to combat mosquitoes and black flies and the diseases they carry. Among the most effective alternative means of controlling these pests are the highly specific microbial agents derived from *Bacillus thuringiensis* or *Bacillus sphaericus*. The microbial control of mosquitoes and black flies is a very important, rapidly developing area of science. Entomologists and microbiologists have already achieved spectacular successes using *B. thuringiensis* and *B. sphaericus* against these pests. Recent discoveries of new bacterial isolates specific to new hosts and recent genetic improvements in these isolates have created the potential for wide scale use of these biological control agents. Efficient microbial control of mosquitoes and black flies can now be achieved, but a proper knowledge of factors relating to the safe and effective use of these biological control agents is necessary. The efficacy of *B. thuringiensis* and *B. sphaericus* is influenced by the inherent differential tolerance of the target mosquitoes or black flies by the formulation technology and application of these agents, and by environmental factors, especially sun light and temperature.
