**Relativity in Curved Spacetime** Eric Baird, 2007 Relativity theory has become one of the icons of Twentieth Century science It s reckoned to be a difficult subject taught as a layered series of increasingly difficult mathematics and increasingly abstract concepts We re told that relativity theory is supposed to be this complicated and counter intuitive But how much of this historical complexity is really necessary Can we bypass the interpretations and paradoxes and pseudoparadoxes of Einstein s special theory and jump directly to a deeper and more intuitive description of reality What if curvature is a fundamental part of physics and a final theory of relativity shouldn t reduce to Einstein s flat 1905 theory on principle Relativity takes us on a whistlestop tour of Twentieth Century physics from black holes quantum mechanics wormholes and the Big Bang to the workings of the human mind and asks what would physics look like without special relativity 394 printed pages 234156 mm 200 figures and illustrations includes bibliography and index [www.relativitybook.com](http://www.relativitybook.com)

**Modeling Black Hole Evaporation** Jose Navarro-salas, Alessandro Fabbri, 2005-01-24 The scope of this book is two fold the first part gives a fully detailed and pedagogical presentation of the Hawking effect and its physical implications and the second discusses the backreaction problem especially in connection with exactly solvable semiclassical models that describe analytically the black hole evaporation process The book aims to establish a link between the general relativistic viewpoint on black hole evaporation and the new CFT type approaches to the subject The detailed discussion on backreaction effects is also extremely valuable a

*From Nuclei to Stars* Sabine Lee,2011 In one way or another Gerry Brown has been concerned with questions about the universe about its vast expanse as well as about its most miniscule fundamental constituents of matter throughout his entire life In his endeavours to understand the universe in many manifestations from nuclei all the way to the stars he has been influenced by some of the most prominent physicists of the 20th century and he himself in turn has influenced a great many scholars This volume a collection of articles dedicated to Gerry on his 85th birthday contains discussions of many of the issues which have attracted his interest over the years The contributions are written by his former students co authors colleagues and admirers and they are strongly influenced by Gerry s own scientific tastes With this compilation we want to express our respect admiration and gratitude we want to celebrate Gerry s scientific and scholarly achievements the inspirational quality of his teaching and the enthusiasm which he himself displayed in his research and which stimulated so many of his students and colleagues over the decades

Andersen,Chjan C. Lim,2014-10-09 This book presents fundamental concepts and seminal results to the study of vortex filaments in equilibrium It also presents new discoveries in quasi 2D vortex structures with applications to geophysical fluid dynamics and magnetohydrodynamics in plasmas It fills a gap in the vortex statistics literature by simplifying the mathematical introduction to this complex topic covering numerical methods and exploring a wide range of applications with numerous examples The authors have produced an introduction that is clear and easy to read leading the reader step by step into this topical area Alongside the theoretical concepts and mathematical formulations interesting applications are discussed This combination makes the text useful for students and researchers in mathematics and physics      **Images of Time** George Jaroszkiewicz,2016 Provides a broad survey of many of these views these Images of Time covering historical cultural philosophical biological mathematical and physical Images of Time including classical and quantum mechanics special and general relativity and cosmology      *Artificial Intelligence for Scientific Discoveries* Raban Iten,2023-04-11 Will research soon be done by artificial intelligence thereby making human researchers superfluous This book explains modern approaches to discovering physical concepts with machine learning and elucidates their strengths and limitations The automation of the creation of experimental setups and physical models as well as model testing are discussed The focus of the book is the automation of an important step of the model creation namely finding a minimal number of natural parameters that contain sufficient information to make predictions about the considered system The basic idea of this approach is to employ a deep learning architecture SciNet to model a simplified version of a physicist's reasoning process SciNet finds the relevant physical parameters like the mass of a particle from experimental data and makes predictions based on the parameters found The author demonstrates how to extract conceptual information from such parameters e.g Copernicus' conclusion that the solar system is heliocentric      **International Symposium on Black Holes, Membranes, Wormholes, and Superstrings** Sunil Kalara,1993-01-01      **Directions in General Relativity: Volume 2** B.
