*Power for the People* Mary M. Timney, 2015-04-29 *Power for the People* examines the tension between the social and political interests of states and the market in the case of energy policy. The author has conducted extensive research on California's experience with electricity restructuring and assesses how the diverging interests of the market vs the state resulted in that notable failure of energy deregulation. She includes overviews of many other states and offers analysis on how states can balance their own interests with the market without imposing high costs on their citizens or the environment. This is the first book to look at deregulation from the point of view of the consumer and the states. Exceptionally clear, balanced, and well written, it is essential reading for anyone interested in public policy, energy studies, and government deregulation of services and would also be an ideal supplement for any courses in these areas. *Hollywood Blackout* Ben Arogundade, 2025-02-04 On 29 February 1940 African American actor Hattie McDaniel became the first person of colour and the first Black woman to win an Academy Award. The moment marked the beginning of Hollywood's reluctant move toward diversity and inclusion. Since then, minorities and women have struggled to attain Academy Awards recognition within a system designed to discriminate against them. For the first time, *Hollywood Blackout* reveals the untold story of their tumultuous journey from exclusion to inclusion, from segregation to celebration. Author Ben Arogundade interweaves the experiences of Black actors and filmmakers with those of Asians, Latinos, South Asians, indigenous peoples, and women. Throughout the decades, their progression to the Oscars podium has been galvanized by defiant boycotts, civil rights protests, and social media activism such as *OscarsSoWhite*. Whether you are a film fan, history lover, or diversity advocate, *Hollywood Blackout* is the quintessential choice for all those who wish to know the real story of Hollywood, the Oscars, and the talents who fought to make change. *Program* Organization of American Historians. *OAH Annual Meeting* Organization of American Historians. Meeting, 2005 **The Ruin of the Roman Empire** James J. O'Donnell, 2011-05-26 What really marked the end of the Roman Empire? James O'Donnell's magnificent new book takes us back to the sixth century and the last time the Empire could be regarded as a single community. Two figures dominate his narrative: Theodoric the barbarian, whose civilized rule in Italy with his philosopher minister Boethius might have been an inspiration, and in Constantinople Justinian, who destroyed the Empire with his rigid passion for orthodoxy and his restless inability to secure his frontiers with peace. The book closes with Pope Gregory the Great, the polished product of ancient Roman schools presiding over a Rome in ruins. [Experiments in Rethinking History](#) Alun Munslow, Robert A. Rosenstone, 2004-08-02 History is a narrative discourse full of unfinished stories. This collection of innovative and experimental pieces of historical writing shows there are fascinating and important new ways of thinking and writing about the past. Gattiker, 2006-04-18 Something for Everyone. If this

book is to succeed and help readers its cardinal virtue must be to provide a simple reference text It should be an essential addition to an information security library As such it should also serve the purpose of being a quick refresher for terms the reader has not seen since the days when one attended a computing science program information security course or workshop As a reference work THE INFORMATION SECURITY DICTIONARY provides a relatively complete and easy to read explanation of common security malware vulnerability and infrastructure protection terms without causing much damage to the usually slim student pocketbook This dictionary can help non specialist readers better understand the information security issues encountered in their work or studying for their certification examination or whilst doing a practical assignment as part of a workshop This book is also essential to a reference collection for an organization's system personnel Special attention is paid to terms which most often prevent educated readers from understanding journal articles and books in cryptology computing science and information systems in addition to applied fields that build on those disciplines such as system design security auditing vulnerability testing and role based access management The dictionary provides definitions that enable readers to get through a difficult article or passage We do not for the most part directly explain how to conduct research or how to implement the terms briefly described
