The Pleasures of Memory Sarah Winter,2015-08-03 What are the sources of the commonly held presumption that reading literature should make people more just humane and sophisticated Rendering literary history responsive to the cultural histories of reading publishing and education *The Pleasures of Memory* illuminates the ways in which Dickens s serial fiction shaped not only the popular practice of reading for pleasure and instruction but also the school subject we now know as English Winter shows how Dickens s serial fiction instigated specific reading practices by reworking the conventions of religious didactic tracts from which most Victorians learned to read Incorporating an influential associationist psychology of learning founded on the cumulative functioning of memory Dickens s serial novels consistently led readers to reflect on their reading as a form of shared experience Dickens s celebrity authorship Winter argues represented both a successful marketing program for popular fiction and a cultural politics addressed to a politically unaffiliated social activist Victorian readership As late nineteenth century educational reforms consolidated British and American readers into mass populations served by state school systems Dickens s beloved novels came to embody the socially inclusive and humanizing goals of democratic education

Memory and Latency in Contemporary Anglophone Literature Yvonne Liebermann, 2023-06-06 Up until fairly recently memory used to be mainly considered within the frames of the nation and related mechanisms of group identity Building on mechanisms of inclusion and exclusion this form of memory focused on the event as a central category of meaning making Taking its cue from a number of Anglophone novels this book examines the indeterminate traces of memories in literary texts that are not overtly concerned with memory but still latently informed by the past More concretely it analyzes novels that do not directly address memories and do not focus on the event as a central meaning making category Relegating memory to the realm of the latent that is the not directly graspable dimensions of a text the novels that this book analyses withdraw from overt memory discourses and create new ways of re-membering that refigure the temporal tripartite of past present and future and negotiate what is memorable in the first place Combining the analysis of the novels overall structure with close readings of selected passages this book links

latency as a mode of memory with the productive agency of formal literary devices that work both on the micro and macro level activating readers to challenge their learned ways of reading for memory **Wounds and Words** Christa

Exploration in Recognition Memory Owen Chao, Flavio F. Barbosa, Mario Inostroza, Jay-Shake Li, James A.

Ainge,2023-06-01 Animals show a natural tendency to explore novel as opposed to familiar stimuli suggesting an underlying memory process in regard to previously encoded information Dependent on this tendency spontaneous object exploration paradigms have been developed in animals to measure memory processes regarding what an object is where an object is located when an object is present the association of an object and its location in which context an object is shown and an episodic context of the combined what where when components These paradigms feature in the absence of extensive training and reward or aversive incentives analogous to incidental encoding of daily memory The application of these object exploration tests is broad and covers many fields such as behavioral neuroscience psychopharmacology and the neurobiology of recognition memory across species The medial prefrontal cortex parietal cortex and medial temporal lobe the hippocampus entorhinal cortex perirhinal cortex and parahippocampal cortex are the main neuroanatomical structures that are considered to underlie recognition memory However the retrosplenial cortex insular cortex anterior thalamus nucleus reuniens of thalamus striatum and amygdala are also considered to play a part As well recent findings also indicate that the lateral hypothalamus interpeduncular nucleus and cerebellum contribute to recognition memory under certain conditions Neurotransmitter systems actively mediate and orchestrate the neuronal communication between these structures during the processing of learning and memory An entire picture of the neuroanatomy and neurobiology of recognition memory will however require multidisciplinary approaches of imaging lesion pharmacology optogenetics chemogenetics and behavioral studies Recognition memory deficits are also major symptoms in multiple neuropsychiatric and neurodegenerative disorders such as schizophrenia attention deficit hyperactivity disorder depressive disorder bipolar disorder autism spectrum disorder Parkinson s disease dementia and Alzheimer s disease Although the etiology of the shared memory deficits is not fully understood it may be associated with environmental pharmacological and genetic factors that are commonly exposed to these disorders Spontaneous object exploration paradigms with minimal involvement of emotional valences are appropriate in the study of neuropsychiatric and neurodegenerative disorders as these disorders may sensitize one to emotional stimuli

leading to a deficit in recognition memory Given the impact of these disorders and their memory deficits on our society there is a strong need to understand the underlying mechanisms and development of innovative pharmaceuticals and gene therapeutics
