Garratt,2022-05-08 Reprint of the original first published in 1862 **Marvels and mysteries of instinct; or, Curiosities of animal life** G. Garratt,1856 **Stories of the Universe: Animal Life** B. Lindsay,2022-11-21 The book is divided into 26 chapters and an index Each chapter deals with a different scientific classification of animal life The author is keen to point out that much of the knowledge scientists have now has been gleaned through the use of microscopes that can see what the human eye cannot unaided *The end of animal life: a start for ethical debate* Franck L.B. Meijboom,Elsbeth N. Stassen,2023-08-07 Killing animals is common practice yet it is not morally neutral The end of animal life is related to many societal and ethical questions and concerns Questions such as how long should we continue to treat an animal before putting it down But also the question whether it could be legitimate to kill individual animals for the welfare of the herd or of future generations The ongoing public and academic discussions on these and on other well known questions like those related to the killing of animals for food or for scientific purposes show that there is no one standard evaluation of animal life This book is an edited volume that enables the reader to get a grip on that plurality of views with regard to animals It helps to deal with the many questions related to the end of animal life The chapters show how the plurality of views on killing animals is related to moral presuppositions by providing a clear overview of the ethical views on end of life decisions Furthermore the book contains a number of applied studies of the ethical questions related to killing animals in various practices including small animal practice wildlife management fishing and fish farming animal experimentation and livestock farming These chapters can help veterinarians scientists students policy makers and many other professionals working with animals to easily get a good overview of the issues at stake and may contribute to responsible decision making with regard to the end of animal life *The Natural Conditions of Existence as They Affect Animal Life* Carl Semper,2025-09-21 Reprint of the original first published in 1883 The Antigonos publishing house specialises in the publication of reprints of historical books We make sure that these works are made available to the public in good condition in order to preserve their cultural heritage **Animal Life and Nature in Singapore** Shou-Hwa Chuang,1973 **Animal Life at Low Temperature** John Davenport,2012-12-06 To humans cold has a distinctly positive

quality Frostbite a nip in the air biting cold all express the concept of cold as an entity which attacks the body numbing and damaging it in the process Probably the richness of descriptive English in this area stems from the early experiences of a group of essentially tropical apes making their living on a cold and windswept island group half way between the Equator and the Arctic During a scientific education we soon learn that there is no such thing as cold only an absence of heat Cold does not invade us heat simply deserts Later still we come to appreciate that temperature is a reflection of kinetic energy and that the quantity of kinetic energy in a system is determined by the speed of molecular movement Despite this realization it is difficult to abandon the sensible prejudices of palaeolithic Homo sapiens shivering in his huts and caves For example appreciating that a polar bear is probably as comfortable when swimming from ice floe to ice floe as we are when swimming in the summer Mediterranean is not easy understanding the thermal sensations of a cold blooded earthworm virtually impossible We must always be wary of an anthropocentric attitude when considering the effects of cold on other species

Wild and tame: pictures and pages of animal life Wild,1893 **Animal Life in Fresh Water** Helen Mellanby,2012-12-06
by Professor L E Eastham Formerly Professor of Zoology in the University of Sheffield Most books are written with the intention of supplying some particular need but few end with such single purpose Mrs Mellanby's is no exception for while the author planned this work to serve as a guide to the school pupil which function it fulfils in an admirable way it will also prove of value to the teacher the university student and the amateur naturalist While it may be argued that it is not the function of the Universities to teach Natural History in the commonly accepted sense it will always be the aim of Zoologists to know more about animals what they are and do where they live and why they live in particular environments It is unfortunate in view of the fact that the majority of students of Zoology enter the teaching profession that the increasing load of instruction in morphology physiology cytology genetics evolution and the like frequently makes a personal study of animal life in relation to environment almost impossible The fortunate ones visit the sea for a fortnight's course in Marine Ecology the others take posts in schools without even this respite and set about converting their academic learning to a school curriculum The result is an undesirable and often slavish imitation of university method in the school classroom
