The Power of Color Marcia B. Hall, 2019-01-01 This beautifully illustrated volume explores the history of color across five centuries of European painting unfolding layers of artistic cultural and political meaning through a deep understanding of technique

The Language of Color in the First Goetheanum Hilde Raske, 2023-05-25 Rudolf Steiner's architectural masterpiece the double domed building known as the first Goetheanum featured decorated ceilings that were designed and partly painted by Steiner himself utilizing vegetable colors and a new layering technique Steiner emphasized that he was seeking a new artistic conception based on a conscious understanding of the nature of color Contemporaries report the extraordinary effect of the domed ceilings paintings combined with the multicolored light emanating from the engraved glass windows The cupolas depicted the creation and ages of the world the initiators of the various cultural epochs and the figure of Christ Tragically the complete work of art that was the first Goetheanum burned down on New Year's Eve 1922 so today we can only get an impression of the lost paintings and windows from Rudolf Steiner's pastel sketches and drawings and a handful of photographs In this lavish volume the result of decades of research and study Hilde Raske provides a detailed examination of the artistic work on the two cupolas including Rudolf Steiner's draft sketches and his written and verbal statements Featuring 30 color and more than 100 black and white illustrations this printing is a high quality facsimile of the long out of print original edition from 1983

Zrenner,2012-12-06 To explain all nature is too difficult a task for anyone man or even for anyone age Tis much better to do a little with certainty and leave the rest for others that come after you than to explain all things Sir Isaac Newton 1642 1727 This book describes and discusses some new aspects of color vision in primates which have emerged from a series of experiments conducted over the past 8 years both on single ganglion cells in monkey retina and on the visually evoked cortical potential in man corresponding psychophysical mechanisms of human perception will be considered as well An attempt will be made to better understand the basic mechanisms of color vision using a more comprehensive approach which takes into account new mechanisms found in single cells and relates them to those found valid for the entire visual system The processing of color signals was followed up from the retina to the visual cortex and to the perceptual centers as far as the available techniques permitted Colour and Language Siegfried Wyler,1992
