Animal Species Their Evolution:

Animal Species and Their Evolution Arthur James Cain, 1960 **Animal Species and Their Evolution** A. J.

Cain, 2014-07-14 Long before Charles Darwin undertook his first voyage animal taxonomists had begun the scientific classification of animals plants and minerals In the mid 1950s taxonomist A J Cain summarized the state of knowledge about the structure of the living world in his major book *Animal Species and Their Evolution* His work remains remarkably current today Here Cain explains each of the terms by which scientists now classify all animals from species through genus family order class and phylum The work of the modern taxonomist is dependent on the work of paleontologists field biologists ecologists and other specialists who help piece together the puzzle of nature This seminal text will interest students in each of these areas It will also appeal to historians of science and to all amateur scientists with an interest in the animal kingdom Originally published in 1993 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 Animal Species and Their Evolution A. J. Cain, 2013

Neurobiology of human language and its evolution: Primate and Nonprimate Perspectives Constance Scharff, Angela D. Friederici, Michael Petrides, The evolution of human language has been discussed for centuries from different perspectives Linguistic theory has proposed grammar as a core part of human language that has to be considered in this context Recent advances in neurosciences have allowed us to take a new neurobiological look on the similarities and dissimilarities of cognitive capacities and their neural basis across both closely and distantly related species A couple of decades ago the comparisons were mainly drawn between human and non human primates investigating the cytoarchitecture of particular brain areas and their structural connectivity Moreover comparative studies were conducted with respect to their ability to process grammars of different complexity So far the available data suggest that non human primates are able to learn simple probabilistic grammars but not hierarchically structured complex grammars The human brain which easily learns both grammars differs from the non human brain among others in how two language relevant brain regions Broca's area and superior temporal cortex are connected structurally Whether the more dominant dorsal pathway in humans compared to non human primates is causally related to this behavioral difference is an issue of current debate Ontogenetic findings suggest at least a correlation between the maturation of the dorsal pathway and the behavior to process syntactically complex structures although a causal prove is still not available Thus the neural basis of complex grammar processing in humans remains to be defined More recently it has been reported that songbirds are also able to distinguish between sound sequences reflecting complex grammar Interestingly songbirds learn to sing by imitating adult song in a process not unlike

language development in children Moreover the neural circuits supporting this behavior in songbirds bear anatomical and functional similarities to those in humans In adult humans the fiber tract connecting the auditory cortex and motor cortex dorsally is known to be involved in the repetition of spoken language This pathway is present already at birth and is taken to play a major role during language acquisition In songbirds detailed information exist concerning the interaction of auditory motor and cortical basal ganglia processing during song learning and present a rich substrate for comparative studies The scope of the Research Topic is to bring together contributions of researchers from different fields who investigate grammar processing in humans non human primates and songbirds with the aim to find answers to the question of what constitutes the neurobiological basis of grammar learning Open questions are Which brain networks are relevant for grammar learning Is there more than one dorsal pathway one from temporal cortex to motor cortex and one to Broca's area and if so what are their functions Has the ability to process sequences of a given hierarchical complexity evolved in different phylogenetic lines birds primates other vocal production learners such as bats Is the presence of a sensory to motor circuit in humans a precondition for development of a dorsal pathway between the temporal cortex and Broca's area What role do subcortical structures Basal Ganglia play in vocal and grammar learning

The Evolution of Primary Sexual Characters in

Animals Janet Leonard, Alex Cordoba-Aguilar, 2010-07-16 Primary sexual traits those structures and processes directly involved in reproduction are some of the most diverse specialized and bizarre in the animal kingdom Moreover reproductive traits are often species specific suggesting that they evolved very rapidly This diversity long the province of taxonomists has recently attracted broader interest from evolutionary biologists especially those interested in sexual selection and the evolution of reproductive strategies Primary sexual characters were long assumed to be the product of natural selection exclusively A recent alternative suggests that sexual selection explains much of the diversity of primary sexual characters A third approach to the evolution of reproductive interactions after copulation or insemination has been to consider the process one of sexual conflict That is the reproductive processes of a species may reflect as does the mating system evolution acting on males and on females but in different directions In this volume authors explore a wide variety of primary sexual characters and selective pressures that have shaped them from natural selection for offspring survival to species isolating mechanisms sperm competition cryptic female choice and sexual arms races Exploring diverse reproductive adaptations from a theoretical and practical perspective The Evolution of Primary Sexual Characters will provide an unparalleled overview of sexual diversity in many taxa and an introduction to the issues in sexual selection that are changing our view of sexual processes

Animals in the Sociologies of Westermarck and Durkheim Salla Tuomivaara, 2019-09-04 This book explores why animals at some point disappeared from the realm and scope of sociology The role of sociology in the construction of a science of the human has been substantial building representations of the human sphere of life as unique Within the sociological tradition however animals have often been invisible even non-existent Through in-depth comparisons

of the texts of prominent early sociologists Emile Durkheim and Edward Westermarck Tuomivaara shows that despite this exclusion representations of animals and human animal relations were far more varied in early works than in the later sociological cannon Addressing a significant gap in the interdisciplinary field of animal studies Tuomivaara presents a close reading of the historical treatment of animals in the works of Durkheim and Westermarck to determine how the human animal boundary was established in sociological theory The diverse forms in which animals and the animal appear in the works of early classical sociology are charted and explored alongside the sociological themes that bring animals into these texts Situated in contemporary theory from critical animal studies to posthumanism this important book lays the groundwork for a disciplinary shift away from this sharp human animal dualism **The Evolution of Intelligence** Robert J. Sternberg, James C. Kaufman, 2013-06-17

How is one to understand the nature of intelligence One approach is through psychometric testing but such an approach often puts the cart before the horse the test before the theory Another approach is to use evolutionary theory This criterion has been suggested by a number of individuals in the past from Charles Darwin in the more distant past to Howard Gardner Stephen Gould Steven Pinker Carl Sagan David Stenhouse and many others The chapters in this book address three major questions 1 Does evolutionary theory help us understand the nature of human intelligence 2 If so what does it tell us about the nature of human intelligence 3 And if so how has intelligence evolved The goal of this book is to present diverse points of view on the evolution of intelligence as offered by leading experts in the field In particular it may be possible to better understand the nature and societal implications of intelligence by understanding how and why it has evolved as it has This book is unique in offering a diversity of points of view on the topic of the evolution of human intelligence *Introduction to Animal Cytogenetics* H.C. Macgregor, 1993-07-31

This book presents animal cytology as a science of seeing and interpreting chromosome form and behaviour and of appreciating its evolutionary significance Its principal objective is to help students develop a basic understanding and confidence on all matters relating to animal chromosomes **ANIMAL TAXONOMY, BEHAVIOUR AND CHRONOBIOLOGY** Dr. Vineeta Rawat, 2023-07-26

About the book The book Animal Taxonomy Behavior and Chronobiology is a comprehensive and multidisciplinary exploration of the intricate relationship between animal taxonomy behavior and the fascinating field of chronobiology This book delves into the diverse world of animal life investigating how taxonomy the classification of species intersects with the study of behavior patterns and the biological rhythms that govern them Book Overview In this illuminating volume readers are invited on a captivating journey through the animal kingdom where taxonomy behavior and chronobiology converge to offer insights into the intricate workings of different species The book seamlessly blends scientific rigor with accessible explanations making it an engaging resource for both experts in the field and curious enthusiasts Key Themes Animal Taxonomy The book begins by delving into the classification of animals discussing the principles and methodologies of taxonomy It explores the organization of species into hierarchical categories and the evolutionary relationships that underpin these classifications

Animal Behavior The second part of the book delves into animal behavior shedding light on the wide array of behavioral patterns exhibited by various species From social interactions to mating rituals readers gain a comprehensive understanding of the behaviors that define different animal groups **Chronobiology** The third section of the book explores the captivating world of chronobiology the study of biological rhythms and their synchronization with environmental cues such as light and dark cycles Readers discover how animals internal clocks regulate physiological processes and behaviors **Interdisciplinary Insights** By merging the realms of taxonomy behavior and chronobiology this book offers a unique interdisciplinary perspective It showcases how understanding animal taxonomy can enhance our comprehension of behavior and chronobiology ultimately deepening our appreciation of the intricate tapestry of life on Earth **Why This Book Matter** **Animal Taxonomy Behavior and Chronobiology** serves as an invaluable resource for researchers educators and students in fields such as biology zoology ethology and chronobiology Its comprehensive exploration of these interconnected areas fosters a holistic understanding of the animal world illuminating the delicate balance between taxonomy behavior and the rhythmic forces that shape life Whether you re a seasoned scientist or a curious reader eager to explore the wonders of the animal kingdom this book invites you to embark on a captivating intellectual journey With its blend of scientific rigor and accessible prose **Animal Taxonomy Behavior and Chronobiology** stands as a testament to the rich diversity of life forms that inhabit our planet and the profound insights their study can offer **Man Vs. Animal: Species at Risk** Amy Tilmont ,Jeff

Garside,2011-07-15 This book takes young readers deep into the complicated and often destructive relationship between humans and nature **Man vs Animal** brings into sharp focus issues that include habitat destruction climate change land management and introduction of invasive species while offering actionable solutions for each both now and in the future

Evolution and the Problem of Natural Evil Michael Anthony Corey,2000 Is the evolutionary process intelligently designed If so why did the Creator choose such an evil infested means to create the biosphere What is the intrinsic nature of evil itself Is natural evil necessary Is evil compatible with the existence of God Will the world s evils ever be totally redeemed What place does humanity occupy in the cosmic scheme of things **Evolution and the Problem of Natural Evil** attempts to answer these and other timeless questions by proposing a bold new conceptual synthesis that aggressively marries the tenets of modern developmental psychology to the basic concepts of classical theism The end result of this novel approach is deeply encouraging insofar as it places the problem of evil as well as the general fate of human existence in a much larger and more optimistic context than has traditionally been imagined **Evolutionary Theory and the Creation Controversy** Olivier

Rieppel,2010-11-01 Evolutionary theory addresses the phenomenon of the origin and diversity of plant and animal species that we observe In recent times however it has become a predominant ideology which has gained currency far beyond its original confines Attempts to understand the origin and historical development of human culture civilization and language of the powers of human cognition and even the origin of the moral and ethical values guiding and constraining everyday life in

human societies are now cast in an evolutionary context In *Evolutionary Theory and the Creation Controversy* the author examines evolutionary theory from a historical perspective explaining underlying metaphysical backgrounds and fundamental philosophical questions such as the paradoxical problem of change existence and creation He introduces the scientists involved their research results and theories and discusses the evolution of evolutionary theory against the background of Creationism and Intelligent Design

Engineering the Human Bert Jaap Koops, Christoph H. Lüthy, Annemiek Nelis, Carla Sieburgh, J.P.M. Jansen, Monika S. Schmid, 2013-02-12 The volume is collection of articles treating the topic of human improvement enhancement from a variety of perspectives philosophical literary medical genetic sociological legal etc The chapters in this volume treat not only those aspects that most immediately come to mind when one thinks of human enhancement such as genetic engineering cloning artificial implants and artificial intelligence etc Somewhat less obvious aspects include evolutionary perspectives in connection with the prolongation of the human lifespan plastic surgery since its beginnings and questions such as whether the distinction between natural and artificial can really be drawn at all and how it has been conceived across the ages or what the legal implications are of recent developments and techniques Many papers make links to the representation of these developments in popular culture from Jules Verne through Aldous Huxley to the movie Gattaca address the hopes and fears that come with them as well as the question how realistic these are While all chapters are written by scientists at the international top of their respective fields all are accessible to a non specialist audience and eminently readable We believe that they represent a state of the art overview of questions that are of interest to a large audience The book thus targets a

non specialist audience with an interest in philosophical sociological scientific and legal issues involved in both traditional and recent matters concerning the desire of mankind to improve itself the human body the human mind and the human condition It is unique in that it brings together all these aspects within a coherent and cohesive collection Cognition and Communication in the Evolution of Language Anne Reboul,2017 This book proposes a new two step approach to the evolution of language whereby syntax first evolved as an auto organizational process for the human conceptual apparatus as a Language of Thought and this Language of Thought was then externalized for communication due to social selection pressures Anne Reboul first argues that despite the routine use of language in communication current use is not a failsafe guide to adaptive history She points out that human cognition is as unique in nature as is language as a communication system suggesting deep links between human thought and language If language is seen as a communication system then the specificities of language its hierarchical syntax its creativity and the ability to use it to talk about absent objects are a mystery This book shows that approaching language as a system for thought overcomes these problems and provides a detailed account of both steps in the evolution of language its evolution for thought and its externalization for communication
