Animal Traditions Behavioural Inheritance In Evolution:

Animal Traditions Eytan Avital, Eva Jablonka, 2000-11-23 Despite its almost universal acclaim the authors contend that evolutionary explanations must take into account the well established fact that in mammals and birds the transfer of learned information is both ubiquitous and indispensable Animal Traditions maintains the assumption that selection of genes supplies both a sufficient explanation of evolution and a true description of its course The introduction of the behavioral inheritance system into the Darwinian explanatory scheme enables the authors to offer new interpretations for common behaviors such as maternal behaviors behavioral conflicts within families adoption and helping This approach offers a richer view of heredity and evolution integrates developmental and evolutionary processes suggests new lines for research and provides a constructive alternative to both the selfish gene and meme views of the world This book will make stimulating reading for all those interested in evolutionary biology sociobiology behavioral ecology and psychology

Mapping the Future of Biology Anouk Barberousse, Michel Morange, Thomas Pradeu, 2009-02-26 Carving Nature at its Joints In order to map the future of biology we need to understand where we are and how we got there Present day biology is the realization of the famous metaphor of the organism as a bete machine elaborated by Descartes in Part V of the Discours a realization far beyond what anyone in the seventeenth century could have im ined Until the middle of the nineteenth century that machine was an articulated collection of macroscopic parts a system of gears and levers moving gasses solids and liquids and causing some parts of the machine to move in response to the force produced by others Then in the nineteenth century two divergent changes occurred in the level at which the living machine came to be investigated First with the rise of chemistry and the particulate view of the composition of matter the forces on macroscopic machine came to be understood as the manifestation of molecular events and functional biology became a study of molecular interactions That is the machine ceased to be a clock or a water pump and became an articulated network of chemical reactions Until the rst third of the twentieth century this chemical view of life as re ected in the development of classical b chemistry treated the chemistry of biological molecules in much the same way as for any organic chemical reaction with reaction rates and side products that were the consequence of statistical properties of the concentrations of reactants
