Animals Of The Mountains Deserts And Grasslands:

Animals of the Mountains, Deserts, and Grasslands Michael Bright, 2002 Describes extinct or endangered animals of the mountains deserts and grasslands including the Tasmanian wolf giant panda and snow leopard **Connecting Mountain Islands and Desert Seas**, 2005 **The Desert Grassland** Mitchel P. McClaran, Thomas R. Van Devender, 2023-05-23 The mixed grass and shrub vegetation known to scientists as desert grassland is common to the basins and valleys that skirt the mountain ranges throughout southwestern North America extending from Arizona New Mexico and Texas down through thirteen Mexican states This variegated ground cover is crucial to life in an arid environment The Desert Grassland offers the most comprehensive study to date of these flora and the rich biotic communities they support Leading experts in geography biology botany zoology and geoscience present new research on the desert grassland and review a vast amount of earlier work They reveal that present day grasses once grew in the ice age forests that existed in these areas before the climate dried and the trees vanished and how the intensity and frequency of fire can influence the plant and animal species of the grassland They also document how the influence of humans from Amerindians to contemporary ranchers public land managers and real estate developers has changed the relative abundance of woody and herbaceous species and how the introduction of new plants and domesticated animals to the area has also affected biodiversity The book concludes with a review of the attempts both failed and successful to reestablish plants in desert grasslands affected by overgrazing drought and farm abandonment Meticulously researched and copiously illustrated The Desert Grassland is a major contribution to ecological literature For advanced lay readers as well as students and scholars of history geography and ecology it will be a standard reference work for years to come **Las Cruces/Lordsburg Resource Area, MFP Amendments**, 1983

Assessment of Grassland Ecosystem Conditions in the Southwestern United States: Wildlife and fish, 2004 Volume 2 Wildlife and fish **Grassland Degradation, Restoration, and Sustainable Management of Global Alpine Areas** Zhanhuan Shang, Allan Degen, Shikui Dong, Huakun Zhou, Yushou Ma, 2024-11-30 The grassland ecosystem on the global alpine area has been degraded seriously over the past half century It can be compared to the Dust Bowlification that is the degradation of American grasslands over the last century This book was compiled by outstanding researchers who have been engaged in field research on the global alpine area for over 20 years with the aim of describing the degradation and restoration of grassland on the global alpine area The long term field studies and personal experience of the authors describe the process of grassland degradation and the difficulties in the restoration efforts Grassland degradation and restoration on the global alpine area involves the stripping and regeneration of the grassland s mattic epipedon The stripping of the mattic epipedon is a unique phenomenon on the global alpine area which has left many unanswered questions Is stripping degradation an inherent inevitable feature of the alpine grassland ecosystem Is it an avoidable occurrence Why is ecological restoration of stripped degraded grassland extremely difficult Does restoration rely on reconstructing the grassland s mattic

epipedon Or can it be done in another way How can sustainable ecological restoration be achieved Frontline researchers in global alpine area have used observational evidence from field studies to respond to these questions and to present a comprehensive picture of the problems and drivers of grassland degradation The climate environment interaction mechanism of grassland degradation is revealed by the holistic approach in this book Ecological restoration is discussed through social and economic participation and past and present restoration actions are analyzed from the perspective of traditional culture and ecological ethics The future sustainable management of grassland under climate change and social and economic development trend is discussed This book will alert people to the dangers of degradation and to the difficulties encountered in ecological restoration Thoroughly presents the processes of grassland degradation from the novel viewpoint of the stripping of mattic epipedon Features the most recent studies to provide new research evidence for long term grassland restoration efforts on the global alpine area Contains in depth analysis of the processes mechanisms and drivers of grassland degradation Discusses the restoration of degraded grasslands using restoration theory and technologies
