Biodegradability of Surfactants D.R. Karsa,M.R. Porter,2012-12-06 The awareness and development of biodegradable surfactants pre dates current pressures by the environmental movement by nearly three decades wherein a responsible industry mutually agreed to replace hard non biodegradable components of household detergents by soft biodegradable alternatives without course to legislation The only requirement at that time was for surfactants used in detergents to exhibit a primary biodegradability in excess of 80% this referring to the disappearance or removal from solution of the intact surface active material as detected by specified analytical techniques This proved useful as observed environmental impacts of surfactants e g visible foam on rivers are associated with the intact molecule Test methods for primary biodegradability were eventually enshrined in EU legislation for nonionic surfactants Directive 821242 EEC amended 73 404IEEC and for anionic surfactants Directive 8212431IEEC amended 73 405IEEC No approved test methods and resultant legislation have been developed for cationic and amphoteric surfactants to date The environmental classification of chemical substances which of course includes surfactants and associated risk assessment utilises a second criterion ready biodegradability This may be assessed by a number of methods which monitor oxygen uptake BOD carbon dioxide production or removal of dissolved organic carbon DOC Some surfactants which comply with the above Detergents Directive are borderline when it comes to ready biodegradability Encyclopedia of Surface and Colloid Science - Arthur T. Hubbard,2002-07-18 This comprehensive reference collects fundamental theories and recent research from a wide range of fields including biology biochemistry physics applied mathematics and computer materials surface and colloid science providing key references tools and analytical techniques for practical applications in industrial agricultural and forensic processes as well as in the production of natural and synthetic compounds such as foods minerals paints proteins pharmaceuticals polymers and soaps

**Anionic Surfactants** Warner M. Linfield, 1976 *Analysis and Fate of Surfactants in the Aquatic Environment* Thomas P. Knepper, Pim de Voogt, Damia Barcelo, 2003-08-22 An understanding of the fate and behaviour of organic chemicals such as surfactants in the environment is a prerequisite for the sustainable development of human health and ecosystems As surfactants are being produced in huge amounts it is important to have a detailed knowledge about their lifetime in the environment their biodegradability in wastewater treatment plants and in natural waters and their ecotoxicity Parameters relevant for the assessment of long term behaviour such as interactions with hormonal systems need to be understood to avoid unexpected adverse effects to future generations of people and the environment However the identification and quantification of commercial surfactants in the environment is made more complicated and cumbersome because they comprise of tens to hundreds of homologues oligomers and isomers of anionic nonionic cationic and amphoteric compounds The EU funded PRISTINE project Priority surfactants and their toxic metabolites in wastewater effluents An integrated study ENV4 CT97 0494 provides the basis for the content of this title It provides policy makers and industry with detailed information on analysis and concentrations of surfactants and their degradation products in the environment In addition to a general introduction to surfactants this book comprises a comprehensive variety of analytical techniques including sample handling for the analysis of surfactants in the aquatic environment Readers will find all the necessary information for analyzing the different groups of surfactants with special emphasis on transformation products Quality assurance is also reported on in detail Chapters on toxicity and risk assessment are also included and give a complete perspective on the surfactants problem in the aquatic environment Presents the finding of EU funded research into fate and behaviour of organic chemicals in the environment Comprises a comprehensive variety of analytical techniques including sample handling for the analysis of surfactants in the aquatic environment Provides relevant information to all groups working in the field of surfactants

Biosurfactants Ramkrishna Sen, 2010-12-31 The microbial world has given us many surprises including microbes that grow under extremely harsh conditions 122C at 40 MPa novel metabolisms such as the uranium and perchlorate reduction and novel chemicals that can be used to control diseases We continually face new and difficult problems such as the need to transition to more carbon neutral energy sources and to find eco friendly chemicals and to find new drugs to treat disease Will it be possible to tap into the seemingly limitless potential of microbial activity to solve our current and future problems The answer to this question is probably yes We are already looking to the microbial world to provide new energy sources green chemicals to replace those made from petroleum and new drugs to fight disease To help us along these paths we are deciphering how microorganisms interact with each other We know that microbial populations interact and communicate with each other The language that microbes use is chemical where small molecules are exchanged among different microbial cells Sometimes these chemicals suppress activities of competitors and could be used as antibiotics or may have other therapeutic uses Other times the chemicals stimulate complex responses in microbial populations such as fruiting body or biofilm formation By understanding the conversation that microbes are having among themselves e g
