Lubick,1996-04 Yellowstone Yosemite the Grand Canyon a few American national parks enjoy amusement park status eclipsing many other beautiful and significant parks due to their heavy political support and spectacular sights Visitors to Petrified Forest National Park in northeastern Arizona can escape from the litter snack bars and crowds of the recreational parks to a 200 million year old ecosystem locked in stone Enhanced by the unrivaled colorful beauty of the adjacent Painted Desert Petrified Forest National Park has captivated visitors since the area was discovered by early explorers The history of the huge fossilized forest parallels that of Arizona It was discovered and looted by adventurers and largely ignored by the government until President Theodore Roosevelt made it a national monument in 1906 The forest's location along Route 66 brought a large number of visitors during the time it enjoyed only monument status but lack of funding for protection allowed much damage and theft of fossilized wood Petrified Forest National Park A Wilderness Bound in Time speeds the reader on an ancient ecological journey from the time of dinosaurs to the discovery of their Triassic fossils and on through a century of political maneuvering to create a place for the forest in American history George Lubick describes how a dedicated few understood

the environmental importance as well as the unique beauty of the park's Triassic Chinle Formation and the Painted Desert. Nearly a million people visit the Triassic annually; this environmental history of the ancient forest is important for those who know the park as well as those interested in natural America. Petrified Forest National Park is one of the few complete histories of any national park; a well-told, balanced treatment of the environmental, political, and historical factors that shape America's natural history.

Trading Zones and Interactional Expertise Michael E. Gorman, 2010-11-19. A proposal for a new framework for fostering collaborations across disciplines addressing both theory and practical applications. Cross-disciplinary collaboration increasingly characterizes today's science and engineering research. The problems and opportunities facing society do not come neatly sorted by discipline. Difficulties arise when researchers from disciplines as different as engineering and the humanities work together and find that they speak largely different languages. This book explores a new framework for fostering collaborations among existing disciplines and expertise communities. The framework unites two ideas to emerge from recent work in STS: trading zones, in which scientific subcultures, each with its own language, develop the equivalents of pidgin and creole; and interactional expertise, in which experts learn to use the language of another research community in ways that are indistinguishable from expert practitioners of that community. A trading zone can gradually become a new area of expertise facilitated by interactional expertise and involving negotiations over boundary objects, objects represented in different ways by different participants. The volume describes applications of the framework to service science, business strategy, environmental management, education, and practical ethics. One detailed case study focuses on attempts to create trading zones that would help prevent marine bycatch; another investigates trading zones formed to market the female condom to women in Africa; another describes how humanists embedded in a nanotechnology laboratory gained interactional expertise, resulting in improved research results for both humanists and nanoscientists. Appalachian Mountain Club, 1888 **At Home in the World** Kathleen A. Cairns, 2021-05 At Home in the World examines the extraordinary and largely unheralded role women played in forging the modern environmental movement specifically in California *Nature's Ghosts* Mark V. Barrow, 2024-05-31 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act naturalists and concerned citizens recognized and worried about the problem of human caused extinction As Mark V Barrow reveals in *Nature's Ghosts* the threat of species loss has haunted Americans since the early days of the republic From Thomas Jefferson's day when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed through the pioneering conservation efforts of early naturalists like John James Audubon and John Muir Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction With the destruction of the passenger pigeon and the precipitous decline of the bison professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern industrial society That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle the California condor and the whooping crane A sweeping beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them *Nature's Ghosts* offers an unprecedented view of what we've lost and a stark reminder of the hard work of preservation still ahead

The Unnaming of Kroeber Hall Andrew Garrett, 2023-12-12 A critical examination of the complex legacies of early Californian anthropology and linguistics for twenty first century communities In January 2021 at a time when many institutions were reevaluating fraught histories the University of California removed anthropologist and linguist Alfred Kroeber s name from a building on its Berkeley campus Critics accused Kroeber of racist and dehumanizing practices that harmed Indigenous people university leaders repudiated his values In *The Unnaming of Kroeber Hall* Andrew Garrett examines Kroeber s work in the early twentieth century and his legacy today asking how a vigorous opponent of racism and advocate for Indigenous rights in his own era became a symbol of his university s failed relationships with Native communities Garrett argues that Kroeber s most important work has been overlooked his collaborations with Indigenous people throughout California to record their languages and stories *The Unnaming of Kroeber Hall* offers new perspectives on the early practice of anthropology and linguistics and on its significance today and in the future Kroeber s documentation was broader and more collaborative and multifaceted than is usually recognized As a result the records Indigenous people created while working with him are relevant throughout California as communities revive languages names songs and stories Garrett asks readers to consider these legacies arguing that the University of California chose to reject critical self examination when it unnamed Kroeber
