Sidharth, Marisa Michelini, Christian Corda, 2024-05-17 This book is a collection of contributions presented at the 16th annual international symposium Frontiers of Fundamental Physics FFP16 supported by Istanbul University As a document of the latest occurrence of this very important gathering it presents the most recent advances in fundamental physics and physics teaching For nearly fifteen years the FFP has attracted some of the greatest physicists in the world The broad objective of the entire endeavor has been to enable scholars working in slightly different areas to meet on a single platform Even with this particular year's safety restrictions arising from Covid we feel that the general mission has been carried out as fully as in any year The book features addresses given by a host of expert contributors all of which are organized according to seven individual themes The areas covered include Astronomy and Astrophysics Particle Physics Theoretical Physics Gravitation and Cosmology Computational Physics Condensed Matter Physics Complex Systems and related areas This book should prove to be a veritable bounty for anyone with an interest in the continued evolution of our understanding of the physical world

Physics and Chemistry of the Solar System John Lewis, 2012-12-02 Physics and Chemistry of the Solar System focuses on planetary physics and chemistry This book consists of 12 chapters Chapters I to IV cover the general properties and environment of the planetary system The solar system beyond Mars is elaborated in Chapters V to VIII while the inner solar system is considered in Chapters XI to XII In these chapters this compilation specifically discusses the limitations on big bang nucleosynthesis structure and classification of galaxies and mass and angular momentum distribution The radio wave propagation in space plasmas interiors of Jupiter and Saturn density and composition of icy satellites and evaporation and non gravitational forces are also deliberated This text also explains the physical properties of meteorites geology of the Moon geophysical data on Mars and search for extraterrestrial intelligence This publication is a good reference for first year graduate students who intend to take graduate courses in specialized areas of planetary sciences as well as practicing Ph D scientists with training in physics chemistry geology astronomy meteorology and biology **Annual Review of**
