*Moving Questions* Joseph D Robinson, 2013-05-27 This book describes a half century of research on cellular membrane transport and on metabolic energy capture and utilization During this time which begins in the late 1930s the effort and imagination of various scientists overthrew reigning formulations created novel explanatory models and unified previously distinct experimental fields My primary goal is to display the course of that research showing how new experiments defined novel entities and processes and how an encompassing field bioenergetics then emerged A secondary goal is to present examples of mainstream biological research that illustrate how experimental results seen as refutations confirmations and elaborations can sway opinion toward a solid consensus This interpretation differs from the currently fashionable view of some commentators that stresses instead the central roles of power prestige gender class and ethnicity In any case the scientific practices exhibited here deserve proper philosophical scrutiny Although constraints of space have squeezed any analysis from this draft brief mention of salient issues does appear in relevant chapters and in the final conclusions Oddly historians and philosophers seem reluctant to deal with this science Those who do consider biological topics tend to focus on the theory of evolution even though the bulk of biological research in this century in terms of papers published and technology influenced has dealt not with evolution per se but with what may be termed physiology and biochemistry And these endeavors which are the aims efforts and accomplishments of the vast majority of biologists have been largely ignored

**Iron, Nature's Universal Element** Eugenie V. Mielczarek, Sharon Bertsch McGrayne, 2000 Mielczarek physics George

Mason U and science writer McGrayne explore the critical importance of the metal element in life from bacteria to humans They report on recent discoveries about iron and magnetism in bacteria in myriad animal and plant species and in humans such as that many migrating animals have minute deposits of magnetite inside them that are sensory navigators They also of course discuss the role of iron in mammalian blood and the iron related diseases of humans **Aquatic Microbial Ecology** Jürgen Overbeck, Ryszard J. Chrost, 2012-12-06 Aquatic microbial ecology a growing interdisciplinary field has become increasingly compartmentalized in recent years The aim of this volume is to propose a framework for biochemical and molecular approaches which are employed ever more widely in studies of aquatic microbial communities and ecosystem functioning The book presents state of the art applications of modern molecular research techniques to a range of topics in ectoenzymes microbial carbon metabolism bacterial population dynamics RNA chemotaxonomy of microbial communities plasmids and adaptation to environmental conditions Written for limnologists marine biologists and all researchers interested in environmental microbiology and molecular aspects of ecology this volume will provide a stimulating introduction to this emerging field The Ecology and Physiology of the Fungal Mycelium British Mycological Society. Symposium, D. H. Jennings, 1984-09-27 This 1984 symposium volume was the first of its kind to deal specifically with the vegetative fungal mycelium Annual Review of Public Health, 1986 Annual Review of Immunology, 1986 Advances in Microbial Physiology, 1993-09-29 This research level review series covers diverse aspects of microbial physiology and biochemistry including inositol metabolism in yeasts bacterial adhesion organic acids the bacterial flagellum mechanical behaviour of bacterial cell walls **Critical Reviews in Biochemistry** Chemical Rubber Company, 1984 Archives of Virology, 1984 **Subject Guide to Books in Print**, 1997 Bulletin European de Physiopathologie Respiratoire, 1983 Some issues include the transactions of the Entretiens de physiopathologie respiratoire **Annual Review of Genetics** Allan Campbell, 1997-12 Bioenergetics Kevin Clark, 2012-03-02 Cellular life depends upon energy storage transformation utilization and exchange in order to optimally function and to stay off death The over 200 year old study of how cells transform biological fuels into usable energy a process broadly known as bioenergetics has produced celebrated traditions in explaining origins of life metabolism ecological adaptation homeostasis biosynthesis aging disease and numerous other life processes InTech's edited volume Bioenergetics brings together some of these traditions for readers through a collection of chapters written by international authorities Novice and expert will find this book bridges scientific revolutions in organismic biology membrane physiology and molecular biology to advance the discipline of bioenergetics toward solving contemporary and future problems in metabolic diseases life transitions and longevity and performance optimization **Annual Review of Biophysics and Biophysical Chemistry** Donald M. Engelman, 1985-06 Methane and Climate Change Dave Reay, Pete Smith, 2010-08-12 Methane is a powerful greenhouse gas and is estimated to be responsible for approximately one fifth of man made global warming Per kilogram it is 25 times more powerful than carbon dioxide over a 100 year time horizon and

global warming is likely to enhance methane release from a number of sources Current natural and man made sources include many where methane producing micro organisms can thrive in anaerobic conditions particularly ruminant livestock rice cultivation landfill wastewater wetlands and marine sediments This timely and authoritative book provides the only comprehensive and balanced overview of our current knowledge of sources of methane and how these might be controlled to limit future climate change It describes how methane is derived from the anaerobic metabolism of micro organisms whether in wetlands or rice fields manure landfill or wastewater or the digestive systems of cattle and other ruminant animals It highlights how sources of methane might themselves be affected by climate change It is shown how numerous point sources of methane have the potential to be more easily addressed than sources of carbon dioxide and therefore contribute significantly to climate change mitigation in the 21st century
