Agencies, 1985 Larrick, 2012-12-06 Cancer viruses have played a paradoxical role in the history of cancer research Discovered in 1911 by Peyton Rous 1 at the Rockefeller Institute they were largely ignored for several decades Witness his eventual recognition for a Nobel Prize but not until 1966 setting an all time record for latency and testimony to one more advantage of longevity In the 1950s another Rockefeller Nobelist Wendell Stanley spearheaded a campaign to focus attention on viruses as etiological agents in cancer his plat form having been the chemical characterization of the tobacco mosaic virus as a pure protein correction ribonucleoprotein in 1935 2 This doctrine was a centerpiece of the U S National Cancer Crusade of 1971 if human cancers were caused by viruses the central task was to isolate them and prepare vaccines for immunization At that point many observers felt that perhaps too much attention was being devoted to cancer viruses. It was problematic whether viruses played an etiological role in more than a handful of human cancers **Annual review of biochemistry** Charles C. **Co- and Posttranslational Proteolysis of Proteins**, 2001-09-28 This volume examines a number of Richardson, 1986 different proteases a type of enzyme that are required in order for the change to a biologically active mature protein to occur The discussion of these various proteases is rarely undertaken in one volume and will serve as a great resource for scientists studying the group of proteases on signal peptide processing as well as those working on propeptide processing These areas of research do not normally overlap and yet they are each of common importance to the same cell processes
