 B. Gennis,2013-04-17 New textbooks at all levels of chemistry appear with great regularity Some fields like basic
 biochemistry organic reaction mechanisms and chemical thermodynamics are well represented by many excellent texts and
 new or revised editions are published sufficiently often to keep up with progress in research However some areas of
 chemistry especially many of those taught at the graduate level suffer from a real lack of up to date textbooks The most
 serious needs occur in fields that are rapidly changing Textbooks in these subjects usually have to be written by scientists
 actually involved in the research which is advancing the field It is not often easy to persuade such individuals to set time
 aside to help spread the knowledge they have accumulated Our goal in this series is to pinpoint areas of chemistry where
 recent progress has outpaced what is covered in any available textbooks and then seek out and persuade experts in these
 fields to produce relatively concise but instructive introductions to their fields These should serve the needs of one semester
 or one quarter graduate courses in chemistry and biochemistry In some cases the availability of texts in active research areas
 should help stimulate the creation of new courses
