Annual Review Of Nuclear And Particle Science Volume 44 1994:

Nuclear Weapons, Scientists, and the Post-Cold War Challenge Sidney David Drell, 2007 This volume includes a representative selection of Sidney Drell's recent writings and speeches circa 1993 to the present on public policy issues with substantial scientific components. Most of the writings deal with national security, nuclear weapons, and arms control and reflect the author's personal involvement in such issues dating back to 1960. Fifteen years after the demise of the Soviet Union, the gravest danger presented by nuclear weapons is the spread of advanced technology that may result in the proliferation of nuclear weapons. Of most concern would be their acquisition by hostile governments and terrorists who are unconstrained by accepted norms of civilized behavior. The current challenges are to prevent this from happening and at the same time to pursue aggressively the opportunity to escape from an outdated nuclear deterrence trap. *Annual Review of*

Proceedings Of The 3rd Japan-Italy Joint Symposium '97 Cosimo Signorini, F. Soramel, T. Kishida, 1998-12-30 These proceedings present the most recent progress made by Japanese and Italian researchers in the field of heavy ion physics. They cover both experimental and theoretical aspects from low energies Tandem Van de Graaff accelerators to medium energies LINAC Cyclotrons up to relativistic energies LHC at CERN. The majority of the experiments presented have been performed in the two largest Italian laboratories LNL Legnaro Padova with the Tandem SC Linac ALPI LNS Catania with the Tandem SC Cyclotron and in one of the largest Japanese facilities RIKEN Saitama with the Ring Cyclotron. The future Italian developments with relativistic heavy ions at LHC CERN are also presented as well as experiments in collaboration with other laboratories like JAERI CNS University of Tokyo the Tandem Accelerator Center Tsukuba GANIL France and the Accelerator Laboratory in Munich Germany. The highlights of the proceedings and the area in which most experimental efforts are presently involved are research with radioactive ion beams at RIKEN with the RIPS separator spectroscopy study at LNL with the GASP EUROBALL 4 spectrometers and intermediate energy physics deep inelastic fragmentation at LNS. Also presented are the future trends in Japan at RIKEN RiBeam Factory and JHP at KEK and in Italy EXCYT at LNS and SPES at LNL. All these new developments are strongly connected with production and subsequent exploitation of radioactive ion beams and offer a very promising fertile future. End in Sight Nathan E. Busch, 2014-10-17 The global threat of nuclear weapons is one of today's key policy issues. Using a wide variety of sources including recently declassified information, Nathan E. Busch offers detailed examinations of the nuclear programs in the United States, Russia, China, Iraq, India, and Pakistan, as well as the emerging programs in Iran and North Korea. He also assesses the current debates in international relations over the risks associated with the proliferation of nuclear weapons in the post-Cold War world. Busch explores how our understanding of nuclear proliferation centers on theoretical disagreements about how best to explain and predict the behavior of states. His study bridges the gap between theory and empirical evidence by determining whether countries with nuclear weapons have adequate controls over their nuclear arsenals and fissile material stockpiles such as highly enriched uranium and plutonium. Analyzing the strengths and weaknesses of various systems of nuclear weapons regulation, Busch projects what types of controls proliferating states are likely to employ and assesses the threat posed by the possible theft of fissile materials by aspiring nuclear states or by terrorists. *No End in Sight* provides the most comprehensive and up-to-date analysis of issues at the forefront of contemporary international affairs. With the resurgence of the threat of nuclear terrorism, Busch's insights and conclusions will prove critical to understanding the implications of nuclear proliferation.

Schwitters, Vera Lüth, Peter Paul, 1994 **Physics Since Parity Symmetry Breaking, In Memory Of Prof C S Wu** T. Lu, Fan Wang, 1998-09-02 Madam Chien Shiung Wu, the great physicist of 20th century physics, passed away in February 1997. Born in 1912, she became a towering scientific figure in the second half of the century. Madam Wu and Madame Curie will forever be commemorated as the two great female physicists of the 20th century. On 16-18 August 1997, scientists from around the globe, many of them distinguished in their own right, gathered in Nanjing where Madam Wu spent her undergraduate years to celebrate the glorious achievements of the great lady. This important volume constitutes the proceedings of the conference. The main advances in fundamental symmetry, nuclear particle, and general physics since parity symmetry breaking and the prospects at the turn of the century are addressed by world-renowned experts. The historical developments in the studies of the decay mechanism, vector current conservation, parity charge conjugation, and time reversal nonconservation are vividly depicted by Madam Wu's close friends, including several Nobel laureates.
