The Ecology of Tropical East Asia Richard Corlett, 2014 An updated edition of the only book dedicated to the terrestrial ecology of the East Asian tropics authored by a world renowned tropical ecologist

The Ecology of Tropical East Asia Richard T. Corlett, 2019-06-27 Tropical East Asia is home to over one billion people and faces massive human impacts from its rising population and rapid economic growth It has already lost more than half of its forest cover to agriculture and urbanization and has the highest rates of deforestation and logging in the tropics Habitat loss coupled with hunting and the relentless trade in wildlife products threatens all its large and many of its smaller vertebrates Despite these problems the region still supports an estimated 15-25% of global terrestrial biodiversity and a growing environmental awareness means that it is no longer assumed that economic development justifies environmental damage and no longer accepted that this trade off is inevitable Effective conservation action now depends on integrating a clear understanding of the ecological patterns and processes in the region with the varied needs of its human population This third edition continues to provide an overview of the terrestrial ecology of Tropical East Asia from southern China to Indonesia and from Bhutan and Bangladesh to the Ryukyu Islands of Japan It retains the balance between compactness and comprehensiveness of the previous editions and the even handed geographical treatment of the whole region but it updates both the contents and the perspective Approximately one third of the text is new or greatly modified reflecting the explosion of new research in the region in the last few years and the increasing use of new tools particularly from genomics and remote sensing The change in perspective largely reflects the growing realization that we are in a new epoch the Anthropocene in which human activities have at least as large an influence as natural processes and that stopping or reversing ecological change is no longer an option This does not mean that biodiversity conservation is no longer possible or worthwhile but that the biodiverse future we strive for will inevitably

be very different from the past The Ecology of Tropical East Asia is an advanced textbook suitable for senior undergraduate and graduate level students taking courses on the terrestrial ecology of the East Asian tropics as well as an authoritative regional reference for professional ecologists conservationists and interested amateurs worldwide *Geological Evolution of Central Asian Basins and the Western Tien Shan Range* Marie-Françoise Brunet, Tom McCann, Edward R. Sobel, 2017-10-10 The geological evolution of Central Asia commenced with the formation of a complex Precambrian Palaeozoic orogen Cimmerian blocks were then accreted to the southern margin in the Mesozoic leading to tectonic reactivation of older structures and discrete episodes of basin formation The Indian and Arabian blocks collided with Asia in the Cenozoic leading to renewed structural reactivation intracontinental deformation and basin development This complex evolution resulted in the present day setting of an elongated Tien Shan range flanked by large Mesozoic Cenozoic sedimentary basins with smaller intramontane basins distributed within the range This volume presents multidisciplinary results and reviews from research groups in Europe and Central Asia that focus on the western part of the Tien Shan and some of the adjacent large sedimentary basins These works elucidate the Late Palaeozoic Cenozoic tectono sedimentary evolution of the area Emphasis is given to the collision of terranes and continents and the ensuing fault reactivations The impact of climatic changes on sedimentation is also examined **Asian Geodynamics, Climate and Biodiversity** G. Dupont-Nivet, T.N. Jonell, R. Dommain, P.D. Clift, 2025-06-18 This book addresses the interplay between geodynamics climate and biodiversity focusing on the India Asia collision an ideal setting for studying interactive processes of Earth system sciences The rise of the Himalaya and Tibetan Plateau significantly influenced atmospheric circulation precipitation patterns and biotic evolution yet these interactive mechanisms remain topics of debate New plate tectonic reconstructions combined with fossil records reveal plant and animal dispersal pathways and evolutionary patterns Climatic phenomena including monsoons and glaciations further influenced biodiversity by shaping habitats and driving speciation High altitude regions like the Hengduan Mountains became biodiversity cradles due to habitat heterogeneity and ecological niches Advances in palaeoaltimetry proxies molecular phylogenetics and climate and landscape modelling clarify the complex interactions between tectonics climate and biodiversity Asia s geological history offers insights into past climate biodiversity dynamics that are vital to understand current ecosystem responses to climate change This region s unparalleled biogeological activity makes it a focal point for Earth system science highlighting the need for interdisciplinary research to address global biodiversity and environmental challenges **The Rice-Wheat Cropping System of South Asia** Palit Kataki, Suresh Chandra Babu, 2021-05-30 The lives of more than a billion people depend on the answer This valuable book surveys the problems of the rice wheat cropping system practiced on the Indo Gangetic Plain IGP Introduced at the time of the Green Revolution it transformed agriculture and produced thirty years of bumper crops The Rice Wheat Cropping System of South Asia Efficient Production Management offers scientific analysis of the aftereffects of this intense cropping The Rice Wheat Cropping System of South Asia Efficient

Production Management focuses on the questions of soil depletion pest infestation and soil alkalinity as elements of declining productivity Along with clear charts maps and graphs it provides practical suggestions for improving and maintaining the productivity of this irreplaceable farmland The Rice Wheat Cropping System of South Asia looks at the problems that have arisen for both the rice and wheat phases including depletion of micronutrients degradation of major nutrients from unbalanced fertilization practices infestations of nematodes increasing soil alkalinity as a result of irrigation It also suggests solutions for maintaining productivity including integrated pest management sustainable agriculture micronutrient fertilizers This informative book and its companion volume The Rice Wheat Cropping System of South Asia Trends Constraints Productivity and Policy are essential planning tools for agronomists policymakers and agroeconomists It is also a useful reference for anyone interested in the problems of famine and intensive cropping not only in South Asia but in the world
