Metal Ions and the Route to Life Wolfgang Nitschke, Simon Duval, 2025-08-28 Volume 28 entitled Metal Ions and the Route to Life of the series Metal Ions in Life Sciences advocates for the prime importance of the recognition of metal ions and metal bearing minerals in the transition from inanimate matter to first life on our planet Unlike the relatively unreactive organic molecules the traditional

protagonists of orthodox origin of life hypotheses metals and minerals are natural catalysts abundantly present in the majority of settings on the early Earth considered as conducive to bringing forth life In these palaeogeochemical settings they may have catalyzed the anabolic conversions of inorganic precursor molecules into organics and may have converted redox disequilibria between environmental reductants and oxidants into the ordering i e the lowering of entropy of first living entities Far fetched Yet this is precisely what metal ions do in life today An unlikely coalition of biology biochemistry and bioenergetics and physics thermodynamics and condensed matter physics is growingly questioning the plausibility of the orthodox hypotheses while putting metal ions and minerals centre stage in their scenarios In this volume 29 internationally renowned experts from fields as diverse as microbiology biochemistry astrobiology electrochemistry ecology mineralogy geology and geochemistry shine light from their individual angles on this topic bringing home metal ions primordial importance to extant life presenting minerals with tantalizing reactivities appearing as look alikes of life s processes and sketching out plausible metal ion based scenarios for life s emergence on planet Earth Metal Ions and the Route to Life provides the empirical groundwork to interested researchers and the general public for revisiting their preconceived ideas about the origin of life and for appreciating the absolute indispensability of metal ions in life now just as at its beginnings
