The Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Phytochemical Methods Jeffrey B. Harborne, 2012-12-06. While there are many books available on methods of organic and biochemical analysis, the majority are either primarily concerned with the application of a particular technique, e.g. paper chromatography, or have been written for an audience of chemists or for biochemists working mainly with animal tissues. Thus no simple guide to modern methods of plant analysis exists and the purpose of the present volume is to fill this gap. It is primarily intended for students in the plant sciences who have a botanical or a general biological background. It should also be of value to students in biochemistry, pharmacognosy, food science and natural products organic chemistry. Most books on chromatography, while admirably covering the needs of research workers, tend to overwhelm the student with long lists of solvent systems and spray reagents that can be applied to each class of organic constituent. The intention here is to simplify the situation by listing only a few specially recommended techniques that have wide currency in phytochemical laboratories. Sufficient details are provided to allow the student to use the techniques for themselves and most sections contain some introductory practical experiments which can be used in classwork.

Phytochemical Dictionary Basant Puri, Anne Hall, 1998-12-16. A vast array of natural organic compounds, the products of primary and secondary metabolism, occur in plants. This dictionary provides basic information including structural formulae on plant constituents. It profiles over 3000 substances from phenolics and alkaloids through carbohydrates and plant glycosides to oils and triterpenoids. For each substance the author presents the trivial name, synonyms, structural type, chemical structure showing stereochemistry, molecular weight and formula, natural occurrence, biological activity and commercial or other use. Key references are provided for each class and subclass.

Progress in Phytochemistry L. Reinhold, J. B. Harborne, T. Swain, 2016-06-21. Progress in Photochemistry Volume 5 is a collection of papers that covers studies in the chemical aspects of botany. The title first covers the osmotic regulation in algae and the proceeds to tackling the biochemistry of host response to infection. Next the selection deals with biosynthesis of monoterpenes and chlorophyll biosynthesis and its control. The text also details the chemical constituents of the bryophytes along with the anticancer agents from plants. The book will be of great interest to botanists, biochemists and natural product chemists.

Medicinal Plant Research in Africa Victor Kuete,2013-06-19 The pharmacopoeias of most African countries are available and contain an impressive number of medicinal plants used for various therapeutic purposes Many African scholars have distinguished themselves in the fields of organic chemistry pharmacology and pharmacognosy and other areas related to the study of plant medicinal plants However until now there is no global standard book on the nature and specificity of chemicals isolated in African medicinal plants as well as a book bringing together and discussing the main bioactive metabolites of these plants This book explores the essence of natural substances from African medicinal plants and their pharmacological potential In light of possible academic use this book also scans the bulk of African medicinal plants extract having promising pharmacological activities The book contains data of biologically active plants of Africa plant occurring compounds and synthesis pathways of secondary metabolites This book explores the essence of natural substances from African medicinal plants and their pharmacological potential The authors are world renowned African Scientists **Fundamentals and**

Carotenoids in Photosynthesis A. Young,G. Britton,2012-12-06 Significant developments in recent years have led to a deeper understanding of the role and function of carotenoids in photosynthesis For the first time the biological biochemical and chemical aspects of the role of these pigments in photosynthesis are brought together in one comprehensive reference volume Chapters focus on the photochemistry of carotenoids in light harvesting and photoprotection the nature and distribution of carotenoids in photosynthetic organisms their biosynthesis the herbicidal inhibition of carotenogenesis and the xanthophyll cycle Throughout details are given of the various methodologies used A detailed appendix provides physical data for the major compounds Carotenoids in Photosynthesis is an invaluable reference source for all plant scientists

The fact that of the approximately 600 000 plant species existing on the earth only some 5 % have been specifically investigated chemically or pharmacologically is a challenge to chemists specializing in natural substances and to pharmacologists In view of the limited number of research capacities and the ever diminishing financial means this challenge can only be met if together with an improvement and refinement of methods of analysis medicinal plant research is carried out on a broader interdisciplinary basis with comparable scientifically recognized screening methods and if it is better coordinated with greater use of modern documentation means It is thus necessary in the future to concentrate specifically on projects leading to the development of new medicinal preparations The plenary lectures held in the present symposium of the 1st International Congress for Research on Medicinal Plants reflect these efforts and tendencies At the same time they provide a survey of some of the fields of medicinal plant research which are at present most actual and most intensively researched They range from plant screening isolation and structure elucidation of new principles to the therapeutical optimization of a natural product The lectures given at this congress show clearly the necessity in addition to national phytochemical societies for a central international organisation in which all active medicinal plant researchers in the world are included Their aim should be to provide the impulse for more optimal rational research aimed at the solution of specific projects
