Aspects of Confused Speech Pamela Shakespeare, 2023-07-14 Based on research focusing on the experience of having confused speech and being with confused speakers this book begins with everyday commonly understood ideas such as talking too much and examines how confused speech is brought off as a collaborative activity by the people involved The author became involved in this project because she was interested in how confusion seemed to be something that everyone is not only involved in but also recognizes as part of ordinary life At the same time confusion is a word that is used somewhat as a blanket category for some people considered permanently incompetent and set apart from ordinary members of society Her study analyzes how talk between confused and normal speakers throws light on this tension

Aspects of Confused Speech Taylor & Francis Group, 2018-11-30 **Aspects of Confused Speech** Pam Shakespeare, 1998-01 Aspects of Confused Speech A Study of Verbal Interaction Between Confused and Normal Speakers examines the confused speech of people who have been diagnosed as having dementing illnesses Pamela Shakespeare documents how particular problems or troubles arise in talk how these are dealt with how the label of confusion comes to be applied and how these factors are related to context She strives to keep a balance between the idea of confused talk as an aspect of ordinary talk and confused talk as talk from which confused speakers cannot easily extricate themselves A central theme of this work is that people diagnosed as confused in their speech do not all behave in the same way and in her examination Shakespeare distinguishes between minimally active moderately active and very active confused speakers

The Rhetoricity of Philosophy Blake D. Scott, 2024-08-02 This book aims to recast the way that philosophers understand rhetoric Rather than follow most philosophers in conceiving rhetoric as a specific way of speaking or writing it shows that rhetoric is better understood as a dimension of all human discourse and action what the author calls rhetoricity This book provides the first philosophical treatment of rhetoricity It is motivated by two ongoing developments The first is the debate between Alain Badiou and Barbara Cassin about philosophy's relation to rhetoric Both Badiou and Cassin are critical of rhetoric albeit for different reasons Second there has been a growing resurgence of interest in rhetoric considering the recent rise in authoritarian politics as well as new forms of propaganda driven by persuasive technologies This book identifies the common target of Badiou's and Cassin's otherwise incompatible critiques rhetoric's conception of audience It offers a fresh take on the new rhetoric project of Chaim Perelman and Lucie Olbrechts Tyteca putting their work into conversation with the Badiou Cassin debate The book then turns to the hermeneutic philosophy of Paul Ricoeur in search of an expanded conception of audience It shows that Ricoeur's hermeneutic philosophy allows us to extend Perelman and Olbrechts Tyteca's psychological notion of audience to texts themselves and to argue that human beings have a rhetorical capacity to reflect on audiences in search of what is potentially persuasive The Rhetoricity of Philosophy will be of interest to scholars and advanced students working in contemporary European philosophy rhetoric argumentation studies and social theory

Early Category and Concept Development : Making Sense of the Blooming, Buzzing Confusion David H. Rakison Assistant Professor of Psychology Carnegie Mellon University, Lisa M. Oakes Associate Professor of Psychology University of Iowa, 2003-01-09 Whether or not infants' earliest perception of the world is a blooming buzzing confusion it is not long before they come to perceive structure and order among the objects and events around them At the core of this process and cognitive development in general is the ability to categorize to group events objects or properties together and to form mental representations or concepts that encapsulate the commonalities and structure of these categories

Categorization is the primary means of coding experience underlying not only perceptual and reasoning processes but also inductive inference and language. The aim of this book is to bring together the most recent findings and theories about the origins and early development of categorization and conceptual abilities. Despite recent advances in our understanding of this area, a number of hotly debated issues remain at the center of the controversy over categorization. Researchers continue to ask questions such as: Which mechanisms for categorization are available at birth and which emerge later? What are the relative roles of perceptual similarity and nonobservable properties in early classification? What is the role of contextual variation in categorization by infants and children? Do different experimental procedures reveal the same kind of knowledge? Can computational models simulate infant and child categorization? How do computational models inform behavioral research? What is the impact of language on category development? How does language partition the world? This book is the first to address these and other key questions within a single volume. The authors present a diverse set of views representing cutting edge empirical and theoretical advances in the field. The result is a thorough review of empirical contributions to the literature and a wealth of fresh theoretical perspectives on early categorization.
