Daya Ram Varma, 2011-02-03 **Bronchial Asthma** M. Eric Gershwin, Georges M. Halpern, 2012-12-06 Although the mechanisms and triggers that stimulate and are responsible for the natural history of asthma are steadily being more clearly defined uncertainties still surround both the genetic basis and the etiology of one of the most common syndromes in the world In fact it is of considerable concern and interest that the incidence of asthma today appears to be rising These statistical increments may only reflect an increasing awareness of the disease or its earlier and more sophisticated diagnosis More important however asthma mortality appears to be increasing This increase has occurred despite the continuing expansion of a diagnostic and management information base and the development of novel and ever more effective therapeutic modalities Several explanations have been offered for this increase in mortality including that it may result from a statistical artifact based on a change in the coding criteria for asthma from the International Classification of Diseases Version 8 ICD 8 to ICD 9

worsened pollution delays in seeking medical help behavioral changes deficits in the asthma education of both patients and primary careproviders toxicity of beta agonists and noncompliance with instructions for the proper use of medications It should also be emphasized that the increases in both incidence and mortality may be a reflection of accumulating body burdens of environmental toxicants and of increased oxidative damage There has clearly been a degradation of environmental quality And although considerable attention has been focused on this possibility in both the scientific and lay press more research in this area is definitely needed

Advances in Pharmacology and Chemotherapy, 1981-01-12 *Advances in Pharmacology and Chemotherapy* The Prostaglandins Peter Ramwell, 2013-11-11 There is much evidence to suggest that prostaglandins may have a physiological role to play in the control of thyroid gland metabolism although the precise nature of this role remains to be defined Prostaglandins have been found in normal thyroid tissue and there is evidence of increased levels in some but not all cases of medullary carcinoma of the thyroid which may account for the associated diarrhea Exogenous prostaglandins like TSH bind to thyroid plasma membranes stimulate the adenylate cyclase cyclic AMP system thyroid hormone secretion iodide organification colloid droplet formation glucose oxidation and ³²P incorporation into phospholipids Prostaglandins of the E series are the most potent although their maximal effects are generally less than the maximal effects of TSH The interrelationships existing between TSH and prostaglandins have been the subject of intensive investigation but as yet no unifying concept has emerged TSH and prostaglandins have been shown to occupy different receptors on the thyroid plasma membrane Although TSH can increase intracellular prostaglandin levels probably as a result of increased synthesis

prostaglandins do not appear to be essential intermediates in TSH action on adenylate cyclase The possibility that prostaglandins are part of a negative feedback system controlling TSH action is as yet a tentative hypothesis and further work will be required to unravel the interrelationships between these substances that now appear to be far more complex than has been envisaged thus far Physiology Or Medicine Tore Frønsmyr, Jan E.
