Assessing the Impacts of Climate Change on Natural Resource Systems Kenneth D. Frederick, Norman J. Rosenberg, 1994

Assessing the Impacts of Climate Change on Natural Resource Systems Kenneth D. Frederick, Norman J. Rosenberg, 2012-12-06 This volume characterizes the current state of natural science and socioeconomic modeling of the impacts of climate change and current climate variability on forests grasslands and water It identifies what can be done currently with impact assessments and suggests how to undertake such assessments Impediments to linking biophysical and socioeconomic models into integrated assessments for policy purposes are identified and recommendations for future research activities to improve the state of the art and remove these impediments to model integration are provided This book is for natural and social scientists with an interest in the impacts of climate change on terrestrial and aquatic ecosystems and their socioeconomic impacts and policy makers interested in understanding the status of current assessment capabilities and in identifying priority areas for future research

Greenhouse Economics Clive Spash, 2020-10-28 Examining one of the most crucial issues in the modern world human induced climate change here Clive Spash provides a refreshing interdisciplinary perspective pulling together strands of natural science economics and ethics Described by John Gowdy as the best exposition to date on the political economy of climate policy this remarkable volume poses serious questions and gives intelligent answers The issues it addresses are relevant to a range of environmental problems and it covers themes such as How do we deal with uncertainty and ignorance What roles do science and economics play in policy formation To what extent should individuals take responsibility for the society in which they and their descendants live By rigorously examining international and governmental sources and key contemporary issues Spash provides an up to date and informative analysis A well organized study including a glossary and helpful acronym list this book will be of strong interest to students and academics in the fields of ecological and environmental economics and is essential reading for all those to whom climate change is a professional or personal concern

Climate Change and Water Resources Planning Criteria Kenneth D. Frederick, D.C. Major, Eugene Z. Stakhiv, 2013-04-17 Global climate change is expected to have major impacts on water resources and aquatic ecosystems This prospect presents planners who are already struggling to meet the demands of growing populations and economies with new challenges This volume examines these challenges and the resulting conceptual issues for water planning and project evaluation practices The book is the first attempt to consider whether and how water resources planning principles and evaluation criteria should be altered in view of the potential impacts of anthropogenically induced climate change The principles and procedures that are in use today along with new approaches to nonstructural flood plain management watershed management water markets and wetland banking will serve as the basis for the policies and strategies that deal with climate variability and anticipated change This collection of papers reviews what water management ideas work which ones need to be changed and how planners and managers should begin incorporating

aspects of risk and uncertainty into management decisions to deal expertly with climate change

Floods and Landslides: Integrated Risk Assessment Riccardo Casale, Claudio Margottini, 2012-12-06 Scientific research on natural disasters is now implementing new methodologies and approaches as consequences of 1 mutating impact of extreme natural events in response to societal change like land use lifelines communications transportation etc 2 development which claim for new urban and industrial territories often in hazard prone areas 3 impact of modern society on natural climate variability climate change and consequently on spatial and temporal frequency of extreme events related to hydrological cycle As consequence of the above mentioned items it is necessary to develop a global approach to territory in order to understand reciprocal influence between climate dynamics with their extreme consequences like floods and landslides and socio economic development In such a way and in response to societal change scientific research on floods and landslides is beginning to loose the classical mono disciplinary approach and it is starting to be a science of the hydrological processes The course on Floods and Landslides integrated risk assessment held in Orvieto Italy 19-26 May 1996 has been organised by the European Commission specifically with the aim of transferring to young European scientists these new views in order to contribute to a future scientific community capable to face with the future environmental problems

Wetlands Woodlands **Climate Change and Water Resources Management** Levi D. Brekke, 2009-11 Many challenges including climate change face the Nation's water managers The Intergovernmental Panel on Climate Change IPCC has provided estimates of how climate may change but more understanding of the processes driving the changes the sequences of the changes and the manifestation of these global changes at different scales could be beneficial Since the changes will likely affect fundamental drivers of the hydrological cycle climate change may have a large impact on water resources and water resources managers The purpose of this interagency report is to explore strategies to improve water management by tracking anticipating and responding to climate change Charts and tables Floods in a Changing Climate Slobodan P. Simonović, 2012-11-22 Provides a flood risk management framework for identifying and assessing climate related risks and developing adaptation responses for academic researchers and professionals **Engineering Risk in Natural Resources Management** L. Duckstein, E. Parent, 2013-11-11 The purpose of this paper is to present a methodology for estimating space time stochastic properties of local climatic factors reflecting global climate change Specifically daily precipitation amount and daily mean temperature are considered and illustrated with application to the state of Nebraska U S A Furthermore a drought index with and without global climate change is examined The magnitude and consequences of regional response to anticipated climatic changes are uncertain Houghton et al 1990 Typical questions to be answered are can time series of hydrological events or 10cal climatic variables such as daily temperature be conditioned in scenarios of future climate change and if so how can this be utilized Can extreme historical drought events be reproduced by a stochastic hydroclimatological model Can such a model be used with General Circulation Model GCM outputs to evaluate the regional local effects of climate change scenarios The approach presented in this paper is an extension of the usual analysis of regional hydrometeorological impacts of climate change we propose to examine time series of GCM produced daily atmospheric circulation patterns CP thought to be relatively accurate GCM output to estimate local climatic factors The paper is organized as follows First daily CPs are classified and analyzed statistically first for historical and then for GCM produced data Next the height of the 500 hPa pressure field is introduced as an additional physically relevant variable influencing local climatic factors within each CP type *Climate Change and Vulnerability and Adaptation* Neil Leary, 2013-07-04 Sound and solid case studies on vulnerability and adaptation have been woefully lacking in the international discourse on climate change This set of books begins to bridge the gap Achim Steiner UN Under Secretary General and Executive Director of United Nations Environment Programme Important reading for students and practitioners alike Martin Parry Co Chair Working Group II Impacts Adaptation and Vulnerability Intergovernmental Panel on Climate Change IPCC Fills an important gap in our understanding It is policy relevant and deserves to be widely read Richard Klein Senior Research Fellow Stockholm Environment Institute SEI Sweden The Intergovernmental Panel on Climate Change IPCC concluded in its 2001 report that much of the developing world is highly vulnerable to adverse impacts from climate change

But the IPCC also concluded that the vulnerabilities of developing countries are too little studied and too poorly understood to enable determination of adaptation strategies that would be effective at reducing risks. These authoritative volumes resulting from the work of the Assessments of Impacts and Adaptations to Climate Change (AIACC) project launched by the IPCC in 2002 are the first to provide a comprehensive investigation of the issues at stake. Climate Change and Vulnerability discusses who is vulnerable to climate change, the nature of their vulnerability and the causes of their vulnerability for parts of the world that have been poorly researched until now. Climate Change and Adaptation covers current practices for managing climate risks to food security, water resources, livelihoods, human health and infrastructure, needs for effective management of climate risks, the changing nature of the risks, strategies for adaptation and the need to integrate these strategies into development planning and resource management.

Climate Change, Human Systems, and Policy - Volume I Antoaneta Yotova, 2009-03-25. Climate Change Human Systems and Policy is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems (EOLSS) which is an integrated compendium of twenty-one Encyclopedias. The Theme on Climate Change Human Systems and Policy presented in three volumes deals with the interaction between climate and human systems for policy development. These volumes discuss History, Status and Prediction of Global Climate Change, Potential Large scale Effects of Global Warming, Public Perceptions Toward Global Climate Change, Effects of Potential Sea Level Rises, Economics of Potential Climate Change, Response Strategies for Stabilization of Atmospheric Composition, Policy Framework and Systems Management of Global Climate Change. These three volumes are aimed at the following five major target audiences: University and College students, Educators, Professional practitioners, Research personnel and Policy analysts, managers and decision makers and NGOs.
