Assessing Federal Research And Development For Hazard Loss Reduction:

Assessing Federal Research and Development for Hazard Loss Reduction Charles Meade, Megan Abbott, 2003 The economic costs of natural hazards are escalating Rising population in high risk areas and our increasingly complex infrastructure further increase potential losses The largest amount of federal funding supports research on weather hazards especially short term prediction with comparatively little research on long term loss reduction approaches that improve the resilience of communities and infrastructure Improving loss data and modeling and a establishing more thoughtful framework for the role of research would help policymakers formulate a more productive hazard loss reduction strategy

Severe Thunderstorms and Tornadoes in the United States Peter Folger,2011-04-10 Severe thunderstorms and tornadoes affect communities across the U S every year causing fatalities destroying property and crops and disrupting businesses Tornadoes are the most destructive products of severe thunderstorms Damages from violent tornadoes seem to be increasing similar to the trend for other natural hazards in part due to changing population demographics and more weather sensitive infrastructure and some analysts indicate that losses of 1 billion or more from single tornado events are becoming more frequent Insurance industry analysts state that tornadoes severe thunderstorms and related weather events have caused nearly 57% on average of all insured catastrophe losses in the U S in any given year since 1953 Contents of this report 1 Overview 2 Issues for Congress A Focus on Local Warnings and Forecasts for the National Weather Service Mitigation The National Windstorm Impact Reduction Program Reauthorizing the National Windstorm Impact Reduction Program Climate Change and Severe Weather The April and May 2011 Tornadoes A Link to Climate Change Other Factors Contributing to Risk From Tornadoes Forecasting and Warning The Role of the National Weather Service Summary and Conclusions Appendix Risk from Severe Thunderstorms and Tornadoes Map and tables This is a print on demand report *United States Congressional Serial Set, Serial No. 14919, House Reports Nos. 567-598 , The Hartwell Approach to Climate Policy* Steve Rayner,Mark Caine,2014-09-19 The Hartwell Approach to Climate Policy presents a powerful critique of mainstream climate change policies and details a set of pragmatic alternatives based on the Hartwell Group s collective writings from 1988 2010 Drawing on a rich history of heterodox but increasingly accepted views on climate change policy this book brings together in a single volume a series of key related texts that define the Hartwell critique of conventional climate change policies and the

Hartwell approach to building more inclusive pragmatic alternatives This book tells of the story of how and why conventional climate policy has failed and drawing from lessons learned how it can be renovated It does so by weaving together three strands of analysis First it highlights why the mainstream approach as embodied by the Kyoto Protocol has failed to produce real world reductions in greenhouse gas emissions and delayed real meaningful progress on climate change Second it explores the underlying political economic and technological factors which form the boundary conditions for climate change policy but which are often ignored by policy makers and advocates Finally it lays out a novel approach to climate change guided centrally by the goal of uplifting human dignity worldwide and the recognition that this can only succeed if pursued pragmatically economically and with democratic legitimacy With contributions from leading scholars in the field this work presents a original critique of climate policy and a constructive primer for how to improve it *Wind and Seismic Effects*
