Eustachian Tube and Middle Ear Diseases Iwao Honjo, 2012-12-06
For more than three decades the methods for assessing cell proliferation have been largely the preserve of experimental biologists and in their hands such techniques have contributed greatly to our understanding of the dynamic organisation of normal and pathological tissues In recent years with the advent of novel methodologies there has been increased interest among both pathologists and clinicians particularly oncologists and others interested in neoplasia in assessing cell proliferation This interest has been stimulated by the possibility that indices of cell proliferation may have direct clinical relevance for example in being useful predictors of outcome in patients with certain forms of malignancy In addition interest in assessing cell proliferation has been fuelled by the tremendous advances in our understanding of the mechanisms of cell proliferation and their deregulation in pathological processes Consequently the time is ripe for a monograph critically reviewing the available methods for assessing cell proliferation their potential and their problems We have been particularly concerned to present a balanced view of the advantages and disadvantages of different methods currently available for assessing cell proliferation The assessment of cell proliferation often requires some familiarity with mathematical methods but in this book we have attempted to keep detailed mathematical analyses to a minimum We have asked exponents of each of the well recognised methods to critically review the techniques and the ways in which they may be applied to clinical material

[Cartilage Repair and Regeneration](#) Alessandro Rozim Zorzi, João Batista de Miranda, 2018-02-14 This work is the result of a partnership that began in 2011 when I received for the first time the invitation to be the scientific editor of a book on bone grafting by the still little publisher known as InTech. Now six years later InTech has grown and thrived. My respect and warm approval for the quality of the publisher's work only increased. The hyaline cartilage is a tissue that challenges tissue engineering and regenerative medicine because of its avascular nature. In the 11 chapters of this book the reader will find texts written by researchers working on advanced topics related to basic laboratory research as well as excellent reviews on the clinical use of currently available therapies. **Pulmonary Hypertension in the Modern Era: Science and Clinical Practice, Volume II** Harm Jan Bogaard, Vinicio De Jesus Perez, Elena Goncharova, 2023-03-09 **Molecular Pathology in Clinical Practice** Debra G.B.
