Advanced Topics in Environmental Health and Air Pollution Case Studies Anca Moldoveanu, 2011-08-29. The book describes the effects of air pollutants from the indoor and outdoor spaces on the human physiology. Air pollutants can influence inflammation, biomarkers can influence the pathogenesis of chronic cough, can influence reactive oxygen species (ROS) and can induce autonomic nervous system interactions that modulate cardiac oxidative stress and cardiac electrophysiological changes. These can participate in the onset and exacerbation of upper respiratory and cardiovascular diseases, can lead to the exacerbation of asthma and allergic diseases. The book also presents how the urban environment can influence and modify the impact of various pollutants on human health. Cracking the Metabolic Code James B. LaValle, Stacy Lundin Yale, 2004. Doctors traditionally prescribe a pill for every ill. But for most people these single solutions don't work. The truth is most chronic health problems including stubborn weight gain, unbeatable fatigue, intestinal distress, high blood pressure, creeping cholesterol and high blood sugar are not found in simply one organ but in several parts of the body, often times in twos and threes. This is the result of years of slow, subtle challenges to your metabolism, which is as unique as you are. Your lifestyle habits, stress level, prescription drug use and relationships, as well as the genes you inherit and the environment in which you live, in effect, the sum total of your life experience up to this day determine your personal metabolism and in turn your current state of health. Using a step-by-step, easy-to-implement system of diet, lifestyle strategies and state-of-the-art nutrients and supplements, Dr. James LaValle will help you create an individualized program for reclaiming your metabolism and health. C. Langley-Evans, 2004-01-01. Over the last decade, epidemiological studies have suggested that the risk of coronary heart disease, stroke, mortality and hypertension is in part related to the environment encountered during fetal life. In particular, maternal undernutrition during pregnancy has been highlighted as a causal factor in the long-term programming of disease risk. This book, which brings together the perspectives of leading researchers from Europe, the USA and Australasia, provides the reader with a detailed account of the evidence for and against the nutritional programming of human disease and

considers the biological basis of programming The book addresses a topic of great current interest and consists of three sections programming the fetus programming human disease and the biological basis of nutritional programming

Dust Mites Matthew J. Colloff,2010-02-24 Conservatively at least 100 million people are affected by house dust mite allergy worldwide manifesting itself as asthma rhinitis or atopic dermatitis Despite the growing recognition of this major public health problem and commitment of considerable research resources there is still no simple effective generally applicable strategy for dust mite control The reasons for this are complex but a contributing factor remains some important knowledge gaps and misconceptions regarding aspects of biology and ecology of dust mites The purpose of this book is to provide a comprehensive reference work for all readers with an involvement or interest in house dust mite research and management incorporating for the first time in a single volume the topics of systematics and identification physiology ecology allergen biochemistry and molecular biology epidemiology mite control and allergen avoidance It is hoped the book will help spread the message that studies of the biology and ecology of house dust mites should be regarded within the context of allergic disease rather than as ends in themselves and that approaches to mite control in clinical management are subject to the same series of ecological rules as any other major problem in pest management
