Blackbirds Of Americas:

Life Histories of North American Blackbirds, Orioles, Tanagers, and Allies Arthur Cleveland Bent, 2025-08-01
Reprint of the original first published in 1877 The Antigonos publishing house specialises in the publication of reprints of historical books We make sure that these works are made available to the public in good condition in order to preserve their cultural heritage

Population Trends of Blackbirds and Starlings in North America, 1966-76 Richard A. Dolbeer, Robert A. Stehn, 1978 We used the North American Breeding Bird Survey to estimate trends of red winged blackbirds *Agelaius phoeniceus* common grackles *Quiscalus quiscula* brown headed cowbirds *Molothrus ater* and starlings *Sturnus vulgaris* for 1966-76 in the United States and Canada Extended to a continental scale the survey indicated significant increases in the mean number of redwings cowbirds and starlings observed per route Starlings had the greatest increase 4.96 birds per route or a 19.4% increase The starlings greatest regional increases occurred in the western United States Populations of redwings increased most in the St Lawrence Valley and parts of the Midwest and Lower Plains regions Cowbirds increased the most in the plains from Iowa to Saskatchewan and decreased over parts of the eastern and midwestern United States Grackle populations indicated no change on a continental scale but did show strong increases in the Midwest and Lower Plains regions and declines in Appalachia This knowledge of blackbird and starling population trends in specific areas should improve our ability to understand increasing bird man conflicts to evaluate proposed bird damage control strategies and to develop more effective long term solutions than are available at present

[Life Histories of North American \[birds\].: Blackbirds, orioles, tanagers, and allies](#) Arthur Cleveland Bent, 1919 [Ecology and Management of Blackbirds \(Icteridae\) in North America](#) George M. Linz, Michael L. Avery, Richard A. Dolbeer, 2017-09-19 Shortlisted for the 2018 TWS Wildlife Publication Awards in the edited book category The various species of new world blackbirds often intermingled in large foraging flocks and nighttime roosts collectively number in the hundreds of millions and are a dominant component of the natural and agricultural avifauna in North America today Because of their abundance conspicuous flocking behavior and feeding habits these species have often been in conflict with human endeavors The pioneering publications on blackbirds were by F E L Beal in 1900 and A A Allen in 1914 These seminal treatises laid the foundation for more than 1 000 descriptive and experimental studies on the life histories of blackbirds as well as their ecology and management in relation to agricultural damage and other conflicts such as caused by large winter roosting congregations The wealth of information generated in over a century of research is found in disparate outlets that include government reports conference proceedings peer reviewed journals monographs and books For the first time *Ecology and Management of Blackbirds Icteridae in North America* summarizes and synthesizes this vast body of information on the biology and life histories of blackbirds and their conflicts with humans into a single volume for researchers wildlife managers agriculturists disease biologists ornithologists policy makers and the public The book reviews the life histories of red winged blackbirds yellow headed blackbirds common

grackles and brown headed cowbirds It provides in depth coverage of the functional roles of blackbirds in natural and agricultural ecosystems In doing so this authoritative reference promotes the development of improved science based integrated management strategies to address conflicts when resolutions are needed

Selected Bibliography on the Food Habits of North American Blackbirds Frederick T. Crase, Richard W. DeHaven, 1975 This bibliography lists 261 references on the food habits of nine North American blackbird species Icteridae and on related subjects such as examination techniques seed dispersal and sources of bias The references which include those published through 1974 are listed alphabetically by author and brief annotations are given for most of them

Boreal Birds of North America Jeffrey V. Wells, 2011-11-15 Reaching from interior Alaska across Canada to Labrador and Newfoundland North America's boreal forest is the largest wilderness area left on the planet It is critical habitat for billions of birds more than 300 species regularly breed there After the breeding season many boreal birds migrate to seasonal habitats across the United States Mexico the Caribbean and Central and South America This volume brings together new research on boreal bird biology and conservation It highlights the importance of the region to the global avifauna and to the connectivity between the boreal forest and ecoregions throughout the Americas The contributions showcase a unique set of perspectives on the migration wintering ecology and conservation of bird communities that are tied to the boreal forest in ways that may not have been previously considered
