**Disabilities at Home** Pamela B. Tanguay, Byron P. Rourke, 2001 This book explores the problems children with NLD may face and provides strategies for parents to help them cope and grow from preschool age through their challenging adolescent years The author provides solutions to the everyday challenges of the disorder from early warning signs and self care issues to social skills and personal safety **Models of the Self** Shaun Gallagher, 2013-10-22 A long history of inquiry about

human nature and the self stretches from the ancient tradition of Socratic self knowledge in the context of ethical life to contemporary discussions of brain function in cognitive science It begins with a conflict among the ancients On one view which comes to be represented most clearly by Aristotle the issue is settled in terms of a composite and very complex human nature Who I am is closely tied to my embodied existence The other view found as early as the Pythagoreans and developed in the writings of Plato Augustine and Descartes held that genuine humanness is not the result of an integration of lower functions but a purification of those functions in favour of a liberating spirituality The animal elements are excluded from the human essence The modern debate on the problem of the self although owing much to the insights of Locke and Hume can still be situated within the context of the two schools of ancient thought and this has led many to despair over the lack of apparent progress in this problem Today of course we often tend to look to science rather than philosophy to develop our understanding of a wide range of fundamental issues To what extent is the problem of the self a scientific issue Can insights from the study of neuropsychology and cognitive development in infancy provide a new perspective Can the study of schizophrenia and dissociative identity disorders tell us anything about the nature of human self consciousness Many would answer yes to the above questions but then is it not also the case that the study of exceptional self actualised human experience is equally relevant And can the phenomenological tradition dedicated to the systematic study of human experience and contemporary analytic approaches in philosophy help us out of some of the impasses that have bedevilled the empiricist tradition MODELS OF THE SELF includes all these perspectives in an attempt to cast light on one of the most intractable problems in science and the humanities A critical approach to the social acceptance of renewable energy infrastructures

Susana Batel, David Rudolph, 2021-08-25 This book provides a critical approach to research on the social acceptance of renewable energy infrastructures and on energy transitions in general by questioning prevalent principles and proposing specific research pathways and lines of inquiry that look beyond depoliticised business as usual discourses and research agendas on green growth and sustainability It brings together authors from different socio geographical and disciplinary backgrounds within the social sciences to reflect upon discuss and advance what we propose to be five cornerstones of a critical approach overcoming individualism and socio cognitivism repoliticisations recognising and

articulating power relations for interdisciplinarity interventions praxis and political engagement with research and overcoming localism and spatial determinism As such this book offers academics students and practitioners alike a comprehensive perspective of what it means to be critical when inquiring into the social acceptance of renewable energy and associated infrastructures

From Passions to Emotions Thomas Dixon, 2003-06-05 Today there is a thriving emotions industry to which philosophers psychologists and neuroscientists are contributing Yet until two centuries ago the emotions did not exist In this path breaking study Thomas Dixon shows how during the nineteenth century the emotions came into being as a distinct psychological category replacing existing categories such as appetites passions sentiments and affections By examining medieval and eighteenth century theological psychologies and placing Charles Darwin and William James within a broader and more complex nineteenth century setting Thomas Dixon argues that this domination by one single descriptive category is not healthy Overinclusivity of the emotions hampers attempts to argue with any subtlety about the enormous range of mental states and stances of which humans are capable This book is an important contribution to the debate about emotion and rationality which has preoccupied western thinkers throughout the eighteenth and nineteenth centuries and has implications for contemporary debates
