Calow, 2009-04-01

H. Dennis, 2012-04-10 Winner of the Marsh Book of the Year Award 2012 by the British Ecological Society In A Resource Based Habitat View for Conservation Roger Dennis introduces a novel approach to the understanding of habitats based on resources and conditions required by organisms and their access to them a quantum shift from simplistic and ineffectual notions of habitats as vegetation units or biotopes In drawing attention to what organisms actually use and need in landscapes it focuses on resource composition structure and connectedness all of which describe habitat quality and underpin landscape heterogeneity This contrasts with the current bipolar view of landscapes made up of habitat patches and empty matrix but illustrates how such a metapopulation approach of isolated patchworks can grow by adopting the new habitat viewpoint The book explores principles underlying this new definition of habitat and the impact of habitat components on populations species distributions geographical ranges and range changes with a view to conserving resources in landscapes for whole communities It does this using the example of butterflies the most alluring of insects flagship organisms and key indicators of environmental health in the British Isles where they have been studied most intensively The book forms essential reading for students researchers and practitioners in ecology and conservation particularly those concerned with managing sites and landscapes for wildlife **Chemical Ecology of Plants: Allelopathy in Aquatic and Terrestrial Ecosystems** Inderjit, Azim U. Malik, 2012-12-06

Allelochemicals play a great role in managed and natural ecosystems Apart from plant growth allelochemicals also may influence nutrient dynamics mycorrhizae soil chemical characteristics and microbial ecology Synergistic action of various factors may better explain plant growth and distribution in natural systems The book emphasizes the role of allelochemicals in shaping the structure of plant communities in a broader ecological

perspective The book addresses the following questions 1 How do allelochemicals influence different components of the ecosystem in terms of shaping community structure 2 Why is it difficult to demonstrate interference by allelochemicals i e allelopathy in a natural system in its entirety Despite a large amount of existing literature on allelopathy why are ecologists still skeptical about the existence of allelopathy in nature 3 Why are there only scarce data on aquatic ecosystems 4 What role do allelochemicals play in microbial ecology Ecological Moral Character Nancy M. Rourke, 2024 This book of metaethics focuses on Catholic virtue theory To create an ecological model through which we can imagine the human moral character the book integrates concepts of ecology with Aquinas vision of moral character The book describes the dynamics of a moral character in terms of the processes and functions that take place in an ecosystem The virtues parallel species and other aspects of ecosystems and other participants such as the passions the will and the intellect are also described in terms of this model The book is a creative project with a solid and documented scholarly foundation It aims to begin a conversation about a rarely discussed aspect of virtue ethics The images we use to think about moral character are powerful They inform our understandings of the moral virtues and the ways in which moral character develops The book asks readers to choose deliberately the models we use to imagine moral character and offers this ecological virtue model as a good example for our own time

Sustainable Development Chaouki Ghenai, 2012-03-07 Securing the future of the human race will require an improved understanding of the environment as well as of technological solutions mindsets and behaviors in line with modes of development that the ecosphere of our planet can support Some experts see the only solution in a global deflation of the currently unsustainable exploitation of resources However sustainable development offers an approach that would be practical to fuse with the managerial strategies and assessment tools for policy and decision makers at the regional planning level Environmentalists architects engineers policy makers and economists will have to work together in order to ensure that planning and development can meet our society's present needs without compromising the security of future generations Better planning methods for urban and rural expansion could prevent environmental destruction and imminent crises Energy transport water environment and food production systems should aim for self sufficiency and not the rapid depletion of natural resources Planning for sustainable development must overcome many complex technical and social issues

new towns were busy places with a multitude of people ideas and things This book uses the mass of archaeological data to undertake comparative analyses of houses and properties artefact distribution patterns and access analysis studies to interrogate some 500 Viking Age urban houses This analysis is structured in three parts an investigation of the houses the households and the town Exploring Ireland s Viking Age Towns discusses how these new urban households managed their homes to create a sense of place and belonging in these new environments and allow themselves to develop a new urban identity This book is suited to advanced students and specialists of the Viking Age in Ireland but archaeologists and historians of the early medieval and Viking worlds will find much of interest here It will also appeal to readers with interests in the archaeology of house and home households identities and urban studies
