Blaze Star:

Sky Stories Roger Ptak, 1998 Most of the constellations the patterns of stars found in the night sky are connected with the ancient myths which people developed to give meaning to what they saw in the sky based on the experience of their culture The ideas of modern astronomy play a similar role for us today They are stories which help us understand the phenomena we discover when we look deeper into the sky than is possible with eyes alone In this book the ancient sky stories and those of modern astronomy are woven together in a unique way Coverage includes twenty four important constellations as well as the sun and the moon and the sky as a whole For each of these one of the old stories is tied together with the astronomical understanding of a key feature in that part of the sky allowing one story to serve as a reminder for the other

Chamaeleon-Orion Robert Burnham, 1978-01-01 Offers comprehensive coverage of the numerous celestial objects outside our solar system **Star Groups** John Ellard Gore, 1891 *Star-names and Their Meanings* Richard Hinckley Allen, 1899

The Observer's Year Patrick Moore, 2013-06-29 It was once said that the night sky always looks much the same In fact nothing could be further from the truth There are 365 days in each year 366 in a Leap Year and from an astronomical point of view no two are alike What I aim to do in this book is to go through a complete year and point out some special items of interest for each night It may be a double star a variable star or a nebula it may be a planet or even the Moon in some particular aspect there is plenty of variety Anyone unfamiliar with astronomical terms should consult the Glossary at the end of this book Let it be said at once that you do not need a large and expensive telescope A surprising amount can be seen with the naked eye and binoculars give increased range indeed it is probably fair to say that good binoculars are ideal for the beginner and are far better than very small telescopes Telescopes are of two types refractors and reflectors A refractor collects its light by means of a glass lens known as an object glass OG the light passes down the telescope tube and is brought to focus where an image is formed and is then magnified by a second lens termed an eyepiece Burnham's

Celestial Handbook, Volume Two Robert Burnham, 2013-04-15 Volume II of a comprehensive three part guide to celestial objects outside our solar system ranges from Chamaeleon to Orion Features coordinates classifications physical descriptions hundreds of visual aids 1977 edition **The Expanse of Heaven** Richard Anthony Proctor, 1874 Knowledge, 1893

Selected Correspondence of William Huggins Vol 1 Barbara J Becker, 2024-10-28 William Huggins 1824 1910 was celebrated in his lifetime as the father of astrophysics The letters and observatory notebooks contained in this edition allow Huggins important role in the development of astrophysics to fully emerge Material comes from archives around the world and is previously unpublished **Astronomical Curiosities: Facts and Fallacies** J.
