Bonding and Charge Distribution in Polyoxometalates: A Bond Valence Approach D.M.P. Mingos, 2014-03-12 This book presents the most comprehensive analysis of bonding in polyoxometalates and related oxides based on classical bonding concepts and the bond valence model Numerous tables and figures underline and illuminate the results making it a valuable resource

Polyoxometalate Molecular Science Juan J. Borrás-Almenar, E. Coronado, Achim Müller, M.T. Pope, 2012-12-06 Polyoxometalates POMs form a large distinctive class of molecular inorganic compounds of unrivaled electronic versatility and structural variation with impacts ranging from chemistry catalysis and materials science to biology and medicine This book covers the basic principles governing the structure bonding and reactivity of these metal oxygen cluster anions and the major developments in their molecular science The book comprises three sections The first covers areas ranging from topological principles via synthesis and stability to reactivity in solution It also focuses on the physical methods currently used to extract information on the molecular and electronic structures as well as the physical properties of these clusters The second part reviews different types of POMs focusing on those systems that currently impact other areas of interest such as supramolecular chemistry nanochemistry and molecular magnetism The third section is devoted to POM based materials and their applications and prospects in catalysis and materials science

Metal-Oxo and Metal-Peroxo Species in Catalytic Oxidations B. Meunier, 2003-09-04 The present volume is a description of the current knowledge on the different metal oxo and metal peroxo species which are involved in catalytic oxidations These highly reactivity metal oxygen species are the key intermediates in heme or non heme oxygenases as well as in metal catalyzed oxidations The accumulated knowledge on these reactive entities will facilitate a better understanding of the different intermediates involved in the catalytic cycles of enzymes like cytochromes P 450 non heme oxygenases copper oxygenases in the oxidation of water by the manganese center of Photosystem II in the chemistry of dioxiranes and also in DNA cleavage performed by activated bleomycin The description of these metal oxo and metal peroxo species is based on physico chemical data reactivity results and also on theoretical calculations
