Openness to Creative Destruction Arthur M. Diamond, 2019 Life improves under the economic system often called entrepreneurial capitalism or creative destruction but more accurately called innovative dynamism. Openness to Creative Destruction: Sustaining Innovative Dynamism shows how innovation occurs through the efforts of inventors and innovative entrepreneurs, how workers on balance benefit, and how good policies can encourage innovation. The inventors and innovative entrepreneurs are often cognitively diverse outsiders with the courage and perseverance to see and pursue serendipitous discoveries or slow hunches. Arthur M. Diamond Jr. shows how economies grow where innovative dynamism through leapfrog competition flourishes as in the United States from roughly 1830 to 1930. Consumers vote with their feet for innovative new goods and for process innovations that reduce prices, benefiting ordinary citizens more than the privileged elites. Diamond highlights that because breakthrough inventions are costly and difficult, patents can be fair rewards for invention and can provide funding to enable future inventions. He argues that some fears about adverse effects on the labor market are unjustified since more and better new jobs are created than are destroyed and that other fears can be mitigated by better policies. The steady growth in regulations often defended on the basis of the precautionary principle increases the costs to potential entrepreneurs and thus reduces innovation. The Great Fact of economic history is that after at least 40,000 years of mostly poor, nasty, brutish, and short humans, in the last 250 years have started to live substantially longer and better lives. Diamond increases understanding of why.

Animals, Animality and Controversy in Modern Welsh Literature and Culture Linden Peach, 2022-11-15 This is the first study of the representation of animals and animality in Welsh literature. It introduces the reader to key ideas and concepts from the new and fast-growing field of animal studies and suggests how Welsh rural and urban history might be redrawn from the perspective of animals and their agenda. It provides new and exciting insights into a range of Welsh writings about animals and examines how Welsh literature explores ways of thinking about intelligence, sensibilities, and knowledge from an animal perspective. The book introduces readers to the concept of a relational universe in which all life is bound together through a network of relations and connections and illustrates its importance to animal studies and Welsh writing.

Stronger, Truer, Bolder Karen L. Kilcup, 2021-05-15 Virtually every famous nineteenth-century writer—Harriet Beecher Stowe, Nathaniel Hawthorne, Ralph Waldo Emerson, and many not so famous—wrote literature for children; many contributed regularly to children's periodicals, and many entered the field of nature writing, responding to and forwarding the century's huge social and cultural changes. Appreciating America's unique natural wonders dovetailed with children's growth as citizens, but children's journals often exceeded a pedagogical purpose, intending also to entertain and delight. Though these volumes aimed at a relatively conservative and mostly white middle-class and affluent audience, some selections allowed both children and their parents

room for imaginative escape from restrictive social norms Covering a period that initially regarded children's natural bodies as laboring resources Stronger Truer Bolder traces the shifting pedagogical impulse surrounding nature and the environment through the transformations that included America's nineteenth century emergence as an industrial power Karen L Kilcup shows how children's literature mirrored those changes in various ways In its earliest incarnations it taught children and their parents facts about the natural world and about proper behavior vis vis both human and nonhuman others More significantly as periodical writing for children advanced this literature increasingly promoted children's environmental agency and envisioned their potential influence on concerns ranging from animal rights and interspecies equity to conservation and environmental justice Such understanding of and engagement with nature not only propelled children toward ethical adulthood but also formed a foundation for responsible American citizenship *New York Magazine*, 1984-02-06 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country With award winning writing and photography covering everything from politics and food to theater and fashion the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself while celebrating New York as both a place and an idea

Caudill,2016-04-01 Presenting examples of how literary accounts can provide a supplement to our understanding of science in law this book challenges the view that law and science are completely different It focuses on stories which explore the relationship between law and science especially cultural images of science that prevail in legal contexts Contrasting with other studies of the transfer and construction of expertise in legal settings this book considers the intersection of three interdisciplinary projects law and science law and literature and literature and science Looking at the appropriation of scientific expertise into law from these perspectives this book presents an original introduction into how we can gain insight into the use of science in the courtroom and in policy and regulatory settings through literary sources **Macroeconomic Patterns and Stories** Edward E. Leamer,2008-11-21 The story of this book began with my difficult transition from teaching international economics and econometrics in Economics Ph D programs at Harvard and UCLA to teaching in the MBA programs at the Anderson School at UCLA On the basis of 20 years of apparent teaching success in Ph D education I arrived at the Anderson School in 1990 with a self image as a star teacher but I was greeted with highly disturbing mediocre teaching evaluations Faced with a data set that was inconsistent with my view of reality I did what analysts usually do I formulated a theory why the data were misleading Here is how I thought about it Two aspects of the course content and a momentum drive numerical course evaluations If you rank courses by the average of the content score and the amusement score then the component that can be measured most accurately will determine the

ranking Do you understand why It is what eraging does it eliminates the noise Suppose for example that a student cannot tell anything about the content and the content score is simply a random number varying from student to student Those random numbers will average out across students to about the same number for each course As the average course content score is about the same for every course it is the amusement score that will drive the rankings
