Life Traces of the Georgia Coast Anthony J. Martin, 2013 Have you ever wondered what left behind those prints and tracks on the seashore or what made those marks or dug those holes in the dunes Life Traces of the Georgia Coast is an up close look at these traces of life and the animals and plants that made them It tells about how the tracemakers lived and how they interacted with their environments This is a book about ichnology the study of such traces and a wonderful way to learn about the behavior of organisms living and long extinct Life Traces presents an overview of the traces left by modern animals and plants in this biologically rich region shows how life traces relate to the environments natural history and behaviors of their tracemakers and applies that knowledge toward a better understanding of the fossilized traces that ancient life left in the geologic record Augmented by illustrations of traces made by both ancient and modern organisms the book shows how ancient trace fossils directly relate to modern traces and tracemakers among them insects grasses crabs shorebirds alligators and sea turtles The result is an aesthetically appealing and scientifically grounded book that will serve as source both for scientists and for anyone interested in the natural history of the Georgia coast

The Trace-Fossil Record of Major Evolutionary Events M. Gabriela Mángano, Luis A. Buatois, 2016-11-17 This volume addresses major evolutionary changes that took place during the Mesozoic and the Cenozoic These include discussions on major evolutionary radiations and ecological innovations on land and at sea such as the Mesozoic marine revolution the Mesozoic radiation of vertebrates the Mesozoic lacustrine revolution the Cenozoic radiation of mammals the evolution of paleosol biotas and the evolution of hominins The roles of mass extinctions at the end of the Triassic and at the end of the Cretaceous are assessed This volume set provides innovative reviews of the major evolutionary events in the history of life from an ichnologic perspective Because the long temporal range of trace fossils has been commonly emphasized biogenic structures have been traditionally overlooked in macroevolution However comparisons of ichnofaunas through geologic time do reveal the changing ecology of organism substrate interactions The use of trace fossils in evolutionary paleoecology represents a new trend that is opening a window for our understanding of major evolutionary radiations and mass extinctions Trace fossils provide crucial evidence for the recognition of spatial and temporal patterns and processes associated with paleoecologic breakthroughs

Understanding Palaeontology P.r. Yadav, 2009

Dinosaur Tracks and Other Fossil Footprints of Europe Martin Lockley, Christian Meyer, 2000-03-07 The long and distinguished tradition of tracking dinosaurs and other extinct animals in Europe dates back to the 1830s Yet this venerable tradition of scientific activity cannot compare in magnitude and scope with the unprecedented spate of discovery and documentation of the last few years Now following on the heels of his Dinosaur Tracks and Other Fossil Footprints of the Western United States Martin Lockley teams up with Christian Meyer to present an up to date synthesis of the recent findings in the field of European fossil footprints Drawing extensively on their own research results from studies in Britain Switzerland Portugal Spain and elsewhere the authors

create a dynamic picture of mammal reptile bird and amphibian track makers throughout more than 300 million years of vertebrate evolution placed in the context of Europe's changing ancient environments Beginning with an introduction to tracking and a history of the European tracking tradition *Dinosaur Tracks and Other Fossil Footprints of Europe* then charts a broad path of evolutionary proliferation from the proto dinosaurs of the Early Triassic period to the dinosaurs decline and disappearance in the Upper Cretaceous The survey continues into the age of mammals and birds ending with the cave art of our Paleolithic ancestors

Animal Lessons Kelly Oliver, 2009 Philosophy reads humanity against animality arguing that man is man because he is separate from beast Deftly challenging this position Kelly Oliver proves that in fact it is the animal that teaches us to be human Through their sex their habits and our perception of their purpose animals show us how not to be them This kinship plays out in a number of ways We sacrifice animals to establish human kinship but without the animal the bonds of brotherhood fall apart Either kinship with animals is possible or kinship with humans is impossible Philosophy holds that humans and animals are distinct but in defending this position the discipline depends on a discourse that relies on the animal for its very definition of the human Through these and other examples Oliver does more than just establish an animal ethics She transforms ethics by showing how its very origin is dependent upon the animal Examining for the first time the treatment of the animal in the work of Heidegger Merleau Ponty Derrida Agamben Freud Lacan and Kristeva among others *Animal Lessons* argues that the animal bites back thereby reopening the question of the animal for philosophy
