**Mathematics Education within the Postmodern** Margaret Walshaw, 2004-06-01 This timely and accessible book presents a challenge to accepted wisdoms about both the nature of mathematics and of education. The authors of this groundbreaking volume bring to bear on this intersection a postmodern sensibility that engages with the grand narratives of mathematics education. Thus they provide a key resource for rethinking theory and practice in mathematics education. Each of the chapters develops important insights for mathematics education from mainly French intellectuals of the past: Foucault, Lacan, Lyotard, Deleuze. Each chapter addresses issues relevant to mathematics education, researching and teaching mathematics.

Curriculum, Syllabus Design, and Equity Allan Luke, Annette Woods, Katie Weir, 2013 Curriculum scholars and teachers working for social justice and equity have been caught up in acrimonious and polarizing political debates over content, ideology, and disciplinary knowledge. At the forefront in cutting through these debates and addressing the practical questions involved, this book is distinctive in looking to the technical form of the curriculum rather than its content for solutions. The editors and contributors, all leading international scholars, advance a unified, principled approach to the design of curriculum and syllabus documents that aims for high quality, high equity educational outcomes and enhances teacher professionalism with appropriate system prescription. Stressing local curriculum development capacity and teacher professional responses to specific community and student contexts, this useful practical primer introduces and unpacks definitions of curriculum, syllabus, the school subject, and informed professionalism. It presents key principles of design, discusses a range of approaches, and offers clear, realistic guidelines for the tasks of writing curriculum documents and designing official syllabi and professional development programs at system and school levels. Providing a foundational structure for syllabus design work, *Curriculum, Syllabus Design, and Equity* is relevant for teachers, teacher educators, and curriculum policy workers everywhere who are engaged in the real work of curriculum writing and implementation.

**Mathematics Classrooms in Twelve Countries** David Clarke, Christine Keitel, Yoshinori Shimizu, 2006 The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants. The LPS research design documents sequences of at least ten lessons using three video cameras, supplemented by the reconstructive accounts of classroom participants obtained in post-lesson video-stimulated interviews and by test and questionnaire data and copies of student-written material. In each participating country, data generation focuses on the classrooms of three teachers identified by the local mathematics education community as competent and situated in demographically different school communities within the one major city. The large body of complex data supports both the characterisation of practice in the classrooms of competent teachers and the development of theory.
