Drew, Sergio Pellegrino, 2013-03-09 This Festschrift marks the retirement of Professor Chris Calladine FRS after 42 years on the teaching staff of the Department of Engineering University of Cambridge It contains a series of papers contributed by his former students colleagues and friends Chris Calladine's research has ranged very widely across the field of structural mechanics with a particular focus on the plastic deformation of solids and structures and the behaviour of thin shell structures His insightful books on Engineering Plasticity and Theory of Shell Structures have been appreciated by many generations of students at Cambridge and elsewhere His scientific contribution outside engineering in molecular structures is at least as significant and he is unique among engineers in having co authored a book on DNA Also he has been keenly interested in the research of many students and colleagues and on many occasions his quick grasp and physical insight have helped a student and sometimes a colleague find the nub of the problem without unnecessary effort Many of the papers contained in this volume gratefully acknowledge this generous contribution We thank Professor G M I Gladwell for reading through all of the contributions Mrs R Baxter and Mrs o Constantinides for help in preparing this volume Godfrey Argent Studio for permission to reproduce Calladine's portrait for the Royal Society and Dr A Schouwenburg from Kluwer for his assistance Horace R Drew Sergio Pellegrino ix CHRIS CALLADINE SOME THOUGHTS ON RESEARCH c R High-Pressure Crystallography Andrzej Katrusiak, Paul McMillan, 2004-03-31 Despite the tremendous advances in the techniques and equipment for carrying out high pressure crystallography the application or exploration of the high pressure variable in detailed structural studies remains rare The chapters in this book provide a set of lecture notes and supplementary material for a course on high pressure crystallography The material comprises state of the art reviews of high pressure experiments using X ray and neutron diffraction techniques at synchrotron and neutron facilities and in the

laboratory as well as complementary experimental high pressure techniques and theoretical methods for investigating matter at elevated pressures The materials studies range from elemental solids and liquids to inorganic compounds minerals organic compounds clathrates and pharmaceutical compounds to large biological molecules such as proteins and viruses The book provides a reference for workers in high pressure science wishing to learn more about crystallography and for established crystallographers potentially interested in high pressure as a variable as well as an introductory guide to new researchers in the field

Layton,Alan M. Weinstein,2002-08-06 The papers in this volume arose out of the workshop Membrane Transport and Renal Physiology which was conducted as part of the IMA 1998 1999 program year Mathematics in Biology The workshop brought together physiologists biophysicists and applied mathematicians who share a common interest in solute and water transport in biological systems especially in the integrated function of the kidney Solute and water transport through cells involves fluxes

across two cell membranes usually via specialized proteins that are integral membrane components. By means of mathematical representations, transport fluxes can be related to transmembrane solute concentrations and electrochemical driving forces. At the next level of functional integration, these representations can serve as key components for models of renal transcellular transport. Ultimately, simulations can be developed for transport-dependent aspects of overall renal function. Workshop topics included solute fluxes through ion channels, cotransporters, and metabolically driven ion pumps; transport across fiber matrix and capillary membranes; coordinated transport by renal epithelia; the urine concentrating mechanism; and intra-renal hemodynamic control. This volume will be of interest to biological and mathematical scientists who would like a view of recent mathematical efforts to represent membrane transport and its role in renal function.
