Engineering Design and Mathematical Modelling Nnamdi Nwulu,Mammo Muchie,2020-12-17 Engineering Design and Mathematical Modelling Concepts and Applications consists of chapters that span the Engineering design and mathematical modelling domains Engineering design and mathematical modelling are key tools techniques in the Science Technology and Innovation spheres Whilst engineering design is concerned with the creation of functional innovative products and processes mathematical modelling seeks to utilize mathematical principles and concepts to describe and control real world phenomena Both of these can be useful tools for spurring and hastening progress in developing countries They are also areas where Africa needs to skill up in order to build a technological base The chapters in this book cover the relevant research trends in the fields of both engineering design and mathematical modelling This book was originally published as a special issue of the African Journal of Science Technology Innovation and Development Nature, Design, and Science Del Ratzsch,2001-03-01 Explores the question of whether or not concepts and principles involving supernatural intelligent design can occupy any legitimate place within science Flow Phenomena in Nature: Inspiration, learning and application R. Liebe,2007 Do we have an adequate understanding of fluid dynamics phenomena in nature and evolution and what physical models do we need What can we learn from nature to stimulate innovations in thinking as well as in engineering applications Concentrating on flight and propulsion this unique and accessible book compares fluid dynamics solutions in nature with those in engineering The respected international contributors present up to date research in an easy to understand manner giving common viewpoints from fields such as zoology engineering biology fluid mechanics and physics This transdisciplinary approach eliminates barriers and opens wider perspectives to both of the challenging questions above Contents Applications in Engineering and Medicine Inspiration from Nature Steady and Unsteady Fluid Dynamics Specific Numerical and Experimental Methods Knowing Nature Mara J. Goldman,Paul Nadasdy,Matthew D. Turner,2011-03-15 Political ecology and science studies have found fertile meeting ground in environmental studies While the two distinct areas of inquiry approach the environment from different perspectives one focusing on the politics of resource access and the other on the

construction and perception of knowledge their work is actually more closely aligned now than ever before Knowing Nature brings together political ecologists and science studies scholars to showcase the key points of encounter between the two fields and how this intellectual mingling creates a lively and more robust ecological framework for the study of environmental politics The contributors all actively work at the interface between these two fields and here they use empirical material to explore questions of theoretical and practical import for understanding the politics that surround nature society relations from wildlife management in the Yukon to soil fertility in Kenya In addition they examine how various environmental knowledge claims are generated packaged promoted and accepted or rejected by the different actors involved in specific cases of environmental management conservation and development Finally they ask what is at stake in the struggles surrounding environmental knowledge how such struggles shape conceptions of the environment and whose interests are served in the process

Sustainable Development and Planning III A. Kungolos, C. A. Brebbia, Élias Beriatos, 2007 In recent years in many countries there has been an increase in spatial problems that has led to planning crisis Planning problems often connected with uneven development deterioration of the quality of urban life and destruction of the environment The increase urbanisation of the world coupled with global issues of the environmental pollution resource shortage and economic restructuring demand that we make our cities places worth living in Problems of environmental management and planning are not restricted to urban areas Environments such as rural areas forests coastal regions and mountains face their own problems that require urgent solutions in order to avoid irreversible damages The use of modern technologies in planning gives us new potential to monitor and prevent environmental degradation Effective strategies for management should consider planning and regional development two closely related disciplines and emphasise the demand to handle these matters in an integrated way Containing papers presented at the Third International Conference on Sustainable Development and Planning this book addresses the subjects of regional development in an integrated way as well as in accordance with the principles of sustainability Notable topics include Regional Planning City Planning Rural Development Environmental Impact Assessment Environmental Management Environmental Legislation and Policy Integrated Territorial and Environmental Risk Analysis Ecosystems Analysis Protection and Remediation Social and Cultural Issues Environmental Economics Geo Informatics Urban Landscapes Transportation Waste Management and Resources Management

Linking Australia's Landscapes James Fitzsimons, Ian Pulsford, Geoff Wescott, 2013-06-05 Networks of land managed for conservation across different tenures have rapidly increased in number and popularity in Australia over the past two decades These include iconic large scale initiatives such as Gondwana Link the Great Eastern Ranges Initiative Habitat 141 and the South Australian NatureLinks as well as other landscape scale approaches such as Biosphere Reserves and Conservation Management Networks Their aims have been multiple to protect the integrity and resilience of many Australian ecosystems

by maintaining and restoring large scale natural landscapes and ecosystem processes to lessen the impacts of fragmentation to increase the connectivity of habitats to provide for species movement and adaptation as climate changes and to build community support and involvement in conservation This book draws out lessons from a variety of established and new connectivity conservation initiatives from around Australia and is complemented by international examples Chapters are written by leaders in the field of establishing and operating connectivity networks as well as key ecological and social scientists and experts in governance Linking Australia's Landscapes will be an important reference for policy makers natural resource managers scientists and academics and tertiary students dealing with issues in landscape scale conservation ecology conservation biology environmental policy planning and management social sciences regional development governance and ecosystem services

Applied Design Research Peter Joore, Guido Stompff, Jeroen van den Eijnde, 2022-06-19 Design and research are two fields of knowledge that each has its traditions methods standards and practices These two worlds appear to be quite separate with researchers investigating what exists and designers visualising what could be This book builds a bridge between both worlds by showing how design and research can be integrated to develop a new field of knowledge Applied Design Research A Mosaic of 22 Examples Experiences and Interpretations Focussing on Bridging the Gap between Practice and Academics contains 22 inspiring reflections that demonstrate how the unique qualities of research aimed at studying the present and design aimed at developing the future can be combined This book shows that the transdisciplinary approach is applicable in a multitude of sectors ranging from healthcare urban planning circular economy and the food industry Arranged in five parts the book offers a range of illustrative examples experiences methods and interpretations Together they make up the characteristic of a mosaic each piece contributing a part of the complete picture and all pieces together offering a multi faceted perspective of what applied design research is how it is implemented and what the reader can expect from it This book with its bearings in practice can enthuse early stage researchers with the diversity of its examples while more senior design researchers may recognize

Cities as Sustainable Ecosystems Peter Newman, Isabella Jennings, 2012-09-26 Modern city dwellers are largely detached from the environmental effects of their daily lives The sources of the water they drink the food they eat and the energy they consume are all but invisible often coming from other continents and their waste ends up in places beyond their city boundaries *Cities as Sustainable Ecosystems* shows how cities and their residents can begin to reintegrate into their bioregional environment and how cities themselves can be planned with nature's organizing principles in mind Taking cues from living systems for sustainability strategies Newman and Jennings reassess urban design by exploring flows of energy materials and information along with the interactions between human and non human parts of the system Drawing on examples from all corners of the world the authors explore natural patterns and processes that cities can emulate in order to move toward sustainability Some cities have adopted simple strategies such as harvesting rainwater greening roofs and producing renewable energy Others have created biodiversity parks for endangered species community gardens that support a connection to their foodshed and pedestrian friendly spaces that encourage walking and cycling A powerful model for urban redevelopment *Cities as Sustainable Ecosystems* describes aspects of urban ecosystems from the visioning process to achieving economic security to fostering a sense of place

Earth Jurisprudence Peter D. Burdon, 2014-09-19 The idea of human dominion over nature has become entrenched by the dominant rights based interpretation of private property Accordingly nature is not attributed any inherent value and becomes merely the matter of a human property relationship Earth Jurisprudence Private Property and the Environment explores how an alternative conception of property might be instead grounded in the ecocentric concept of an Earth community Recognising that human beings are deeply interconnected with and dependent on nature this concept is proposed as a standard and measure for human law This book argues that the anthropocentric institution of private property needs to be reconceived drawing on international case law indigenous views of property and the land use practices of agrarian communities Peter Burdon considers how private property can be reformulated in a way that fosters duties towards nature Using the theory of earth jurisprudence as a guide he outlines an alternative ecocentric description of private property as a relationship between and among members of the Earth community This book will appeal to those researching in law justice and ecology as well as anyone pursuing an interest more particularly in earth jurisprudence
