

Module 11: Expert Systems, Business Intelligence and Knowledge management

Objectives

After completing this chapter, students will be able to:

1. To become familiar with the support for different types of decisions at various levels of organizations
2. To become familiar with the support that management receives from decision aids such as Business Intelligence systems, OLAP, Groupware expert systems, and intelligent agents
3. To understand the importance and challenges of formally managing organizational knowledge, and to recognize the technologies that enable successful knowledge management

Expert Systems

An Expert System is defined as an interactive and reliable computer-based decision-making system which uses both facts and heuristics to solve complex decision-making problems. It is considered at the highest level of human intelligence and expertise. It is a computer application which solves the most complex issues in a specific domain.

The expert system can resolve many issues which generally would require a human expert. It is based on knowledge acquired from an expert. It is also capable of expressing and reasoning about some domain of knowledge. Expert systems were the predecessor of the current day artificial intelligence, deep learning and machine learning systems.

Examples of Expert Systems

1. MYCIN: It was based on backward chaining and could identify various bacteria that could cause acute infections. It could also recommend drugs based on the patient's weight.
2. DENDRAL: Expert system used for chemical analysis to predict molecular structure.
3. PXDES: Expert system used to predict the degree and type of lung cancer
4. CaDet: Expert system that could identify cancer at early stages
