Water Pollution Biology P. D. Abel, 1989 Marine Pollution Tobias N. Hofer, 2008 Marine pollution is the harmful effect caused by the entry into the ocean of chemicals or particles An associated problem is that many potentially toxic chemicals adhere to tiny particles which are then taken up by plankton and benthos animals most of which are either deposit or filter feeders concentrating upward within ocean food chains Also because most animal feeds contain high fish meal and fish oil content toxins can be found a few weeks later in commonly consumed food items derived from livestock and animal husbandry such as meat eggs milk butter and margarine One common path of entry by contaminants to the sea are rivers Many particles combine chemically in a manner highly depletive of oxygen causing estuaries to become anoxic This book presents the latest research in the field from around the world EPA-600/3, 1980-02
