Quick Bibliography Series, 1976 *Ecology of Java & Bali* Anthony J. Whitten, Roehayat Emon Soeriaatmadja, 2013-02-05 The Ecology of Java and Bali is a comprehensive ecological survey of two of the most ecologically diverse islands in the Pacific. It also contains the results of original research interviews and personal experience. It will be useful to resource managers, ecologists, and government planners as well as to all others interested in the region. Java and Bali are the best known of all the islands in the Indonesian archipelago. Nowhere else in the country are ecological issues of such importance, and nowhere else is there a better chance of the major development problems being solved. This is because Java has the greatest concentration of development projects, the densest population, excellent human resources, and the interest of many of the most powerful decision makers. Bali meanwhile has the eyes of the world on it as an important tourist destination enjoyed by both domestic and foreign visitors.

The ecology and management of African wetland vegetation Patrick Denny, 2012-12-06 Interest in the biology of African wetlands was initiated in the last century with the hypothesis that Lake Tanganyika was once part of a Jurassic sea and was furthered by Cunningham's expedition at the beginning of this century which proved that it was not. In the late 1920s ecological studies encouraged by the growing importance of inland fisheries were started by British, French, and Belgian biologists. Some twenty years later several government limnological research centres and fishery departments were established in tropical Africa and scientific progress was accelerated. Scientific collaboration between the regions south of the Sahara was started formally in 1951 by the Scientific Council for Africa and stimulated by the International Biological Programme 1964-74 with its emphasis on biological productivity. Some of its interests were taken on by SCOPE which recently selected continental wetlands as a Special Project; hence this book. The five authors, with Patrick Denny as editor, have made a very valuable contribution both to science and to the management of Africa's natural resources. They have filled a gap in the synthesis of knowledge about Africa's environments which is long overdue. The term wetland is used today in several different contexts. For this purpose it excludes the seas and large open inland waters which are too deep for rooted plants but includes the huge areas of floodplains and dambos which may change seasonally from standing water to very dry lands.

Aquatic and Riparian Weeds of the West Joseph M. DiTomaso, Evelyn A. Healy, 2003 This is the first comprehensive identification manual for aquatic and riparian weeds west of the Rocky Mountains. This practical, easy-to-use guide covers 171 aquatic plant species consisting of 58 plant groups including a full description of 82 species and another 96 plants compared as similar species representing 42 plant families. Lavishly illustrated with over 560 photographs and weighing in at 442 pages, this is a must-have reference and field manual for weed control specialists, land managers, water system managers, rice growers, golf course superintendents, and landscape professionals. Anyone interested in learning more about identification of important weeds of aquatic and riparian systems should make room on their bookshelf for this guide.

Invasive Alien Plants J. R. Bhatt, 2012 Invasive alien species are a major threat to biodiversity and ecosystems throughout the world. In India a

country with four of the world's most important biodiversity hotspots the invasion of alien plants means risking a national ecological disaster with major social and economic consequences Currently there is insufficient information about invasive alien plants their distribution rate of spread and adaptability to new environments This book reveals existing and potential invaders evaluates the level of risk they pose to native species and suggests steps to manage spread and limit damage Invaluable to policy makers this book is also required reading for researchers of invasive plants worldwide *Proceedings of the ...
